Maintenance Minimization for Competitive Advantage

Proceedings of the First International Air Tr. This book presents the proceedings of
the First International Air Transport and Operations Symposium, ATOS 2010, held
at the Delft University of Technology in The Netherlands. The focus of ATOS 2010
and these proceedings is on how air transport can evolve

ICAF 2009, Bridging the Gap between Theory and Operational

Practice

Aircraft & Aerospace Asia-Pacific

The 31st Conference and the 25th Symposium of the International Committee on Aeronautical Fatigue will be hosted in Rotterdam, The Netherlands, by the National Aerospace Laboratory NLR, under the auspices of the Netherlands Association of Aeronautical Engineers NVvL, the Technical University of Delft and Stork Fokker AESP B.V. These Proceedings will consist of reviews of aeronautical fatigue activities presented by the national delegates of the 14 member nations of ICAF. It will also contain specialist papers presented by international authors with design, manufacturing, airworthiness regulations, operations and research backgrounds. The papers will be based on the theme "Bridging the gap between theory and operational practice".

Flight Comment

Aerospace Medicine

Aircraft Sustainment and Repair is a one-stop-shop for practitioners and researchers in the field of aircraft sustainment, adhesively bonded aircraft joints, bonded composites repairs, and the application of cold spray to military and civil aircraft. Outlining the state-of-the-art in aircraft sustainment, this book covers the use of quantitative fractography to determine the in-service crack length versus flight hours curve, the effect of intergranular cracking on structural integrity and the structural significance of corrosion. The book additionally illustrates the potential of composite repairs and SPD applications to metallic airframes. Covers corrosion damage assessment and management in aircraft structures Includes a key chapter on U.S. developments in the emerging field of supersonic particle deposition (SPD) Shows how to design and assess the potential benefits of both bonded composite repairs and SPD repairs to metallic aircraft structures to meet the damage tolerance requirements inherent in FAA ac 20-107b and the U.S. Joint Services

SAE Aerospace Standards

The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

AIAA Computing in Aerospace Conference

Proceedings of the IEEE 1989 National Aerospace and Electronics Conference, NAECON 1989

The simplest way to provide customers with products and equipment that are always up and running and that require only modest maintenance is to incorporate low maintenance and high reliability into product design. The author views product maintenance from a life cycle perspective, from initial product concept through death and disposal. In this text, he presents guidelines for assessing and reducing the amount of maintenance a product will require. "Maintenance Minimization for Competitive Advantage" brings a new and practical perspective to maintaining optimal function in industrial equipment and consumer products. The author presents maintenance as a factor to be considered from the initial design on a product, and explains how to design products so that they require minimal maintenance during use.
