The first ever successful computer with a GUI, ability to allow users to preview a document before printing, and a mouse was the Mac. The following are the reasons why it has remained relevant all these years. Turned Icons into Art Since Mac was the first computer with a GUI, it was the first to have icons. Susan Kare designed those first icons for Mac. Macs Beg to Be Networked Back when the Mac was launched, computer networking was exotic and pricey; but even then, Macs could be easily connected to each other. HyperCard Partly Inspired the Web The HyperCard was created by Bill Atkinson in 1987. Through this app, anyone could create on-screen cards with hyperlinks, images, or texts. The Mac laptop is advanced right out of the box, it comes with many basic tools such as calendar management, email, etc. However, there is another world of powerful software for Apple Mac that will make complicated tasks easier. Learn iPhone and iPad cocos2D Game Development provides a rock-solid introduction to the cocos2d iPhone game engine and related tools. It focuses on the process of creating several games made entirely with cocos2d and little-to-no iPhone SDK and OpenGL code. By creating 2-3 sample games over the course of the book, you'll learn key concepts of the cocos2d game engine and relevant tools like Zwoptex (TextureAtlas), ParticleDesigner (Particle Effects), and others. The example games are modeled after popular App Store games so that they are relevant, recognizable, and immediately fun and inspiring. The games increase in complexity and highlight common recurring cocos2d beginner questions. As you move along, you'll learn about possible stumbling blocks and how to navigate them successfully. As you move from beginning to advanced, you'll encounter general game programming wisdom, tips for performance improvement, as well as pointers to alternative implementations and further reading. It is assumed that the reader has previous programming knowledge but not necessarily with Objective-C. Related topics such as Xcode, Objective-C, the iPhone SDK, and OpenGL are only discussed where absolutely necessary.

Etsy is an online retail community just like eBay only that it focuses on vintage or handcrafted commodities. Most of the goods sold there are in the jewelry, arts, crafts, housewares, artisan candies, baked goods, or paper-goods categories. For an item to qualify as vintage it has to be at least 20 years old and can be anything from photos, costumes, housewares, jewelry, and clothing. Etsy provides a great avenue for you to sell your homemade goods—but that's not all. You can find a limitless number of items on Etsy that will help your home business. For instance, if you use The Happy Planner, Filofax, or Erin Condren to schedule and organize your life or business, there are downloadable stickers and inserts that you can buy and use in your planner. If you need promotional items that have your logo on them; there are a good number of Etsy sellers that can make custom swag for you. They will not only make coffee cups and pens, but also cosmetics, jewelry, bookmarks, and pretty much everything with your logo and name on them. For a very long time, a majority of artisans and craftsman sold their commodities at open markets, fairs, and on consignment.

When you hear Apple TV you immediately think it is an actual TV that you are purchasing. But this is not the case. The Apple TV is actually a device that you will use to stream something a little similar to Amazon's Fire or Roku. It is a little black box that is about an inch and a half tall, just a little bit less than four inches, and it runs on a very similar platform to the iPad and the popular iPhones. You can download a list of apps and also games beyond the standard streaming video that you could get from Hulu, Netflix, Amazon, just to name a few. The Apple TV has been centered on various apps, and it is still able to stream multiple TV shows, movies straight to your HDTV, but this is just the tip of the iceberg on the features this box has been packed with. The box allows you to watch and stream podcasts, play your favorite game, stream your workout playlist, and much more. But what is important to note, to enjoy all these benefits this box is ready to provide it will all depend on the apps that you have installed. Some of the apps you will use are free, and some will cost. Think of it this way; the Apple TV is able to turn your TV into a Smart TV. You can either rent your favorite movies or merely stream your collection from your iTunes account. You could also stream movie shows from apps like Hulu Plus or Netflix; stream your music from the Pandora or Apple Music apps. I mean the list is endless on what the Apple TV can actually do for you. The Apple TV 4K has been designed with some of the fastest processors you could find, the same that powers the iPad Pro. The Apple TV box has been made to be as powerful as most laptops we use. It also has a fast graphics processor that has been designed with enough power that could turn the black box into a game console. Nothing sounds better than this. Apple has genuinely revamped the new generation, but this does not mean you have to throw away your older model, just the same thing they have been doing with iPhone. The third generation is still available in the market for you to purchase.
