Polar First

Airframe and Powerplant Mechanics

In May 2007, Jennifer Murray (68) and her co-pilot Colin Bodill (57) set a new world record by becoming the first pilots to fly a round-trip from Pole to Pole - in a helicopter. From the searing heat of the Atacama desert in Peru, over the heights of the Andes and across the hostile southern oceans, to the unforgiving cold of the Antarctic and Arctic, Polar First tells the remarkable story of Murray and Bodill's journey into the record books - a journey which lasted 171 days, took in 26 different countries, and covered more than 33,000 nautical miles.

who flies or wants to learn to fly a helicopter. If you're preparing for private, commercial, or flight instruction pilot certificates, it's more than essential reading—it's the best possible study guide available, and its information can be life-saving. In authoritative and easy-to-understand language, here are explanations of general aerodynamics and the aerodynamics of flight, navigation, communication, flight controls, flight maneuvers, emergencies, and more. Also included is an extensive glossary of terms ensuring that even the most technical language can be easily understood. The Helicopter Flying Handbook is an indispensable text for any pilot who wants to operate a helicopter safely in a range of conditions. Chapters cover a variety of subjects including helicopter components, weight and balance, basic flight maneuvers, advanced flight maneuvers, emergencies and hazards, aeronautical decision making, night operations, and many more. With full-color illustrations detailing every chapter, this is a one-of-a-kind resource for pilots and would-be pilots.

Airline transport pilot and aircraft type rating

This book is not a substitution for the helicopter flight manual and should not be treated as such. It is intended to give further information relating to the different sections of the flight manual and to explain the helicopter systems more clearly. I have added in some extra information where I felt it would be beneficial but overall I have tried to keep the book as simple as possible while still covering all the sections

in the flight manual. This book will not teach you how to fly the aircraft. However it will give you the necessary technical information to conduct your flight safely. It is written with the new Jet Ranger pilot in mind. It is assumed that you already hold your private pilot's licence and have limited or no previous Jet Ranger experience. You should be familiar with flying techniques, as this book will not teach you how to fly.

Calls to understand 'what works' in education are being made the world over. We need to know not only 'what works' but under what conditions, how and why. Causation is central to this. Researchers, educationists, readers and users of research need to know the effects of causes and the causes of effects. This strongly practical book helps researchers and readers of research understand, plan and investigate causation in education. It guides readers through statistical matters, explaining them clearly and simply in words as well as numbers, and shows them how to investigate qualitative causal research in education. After introducing deterministic and probabilistic causation, the book shows how these can be researched in different ways. It explains: how to determine causes from effects and how to link theory and practice in causal research how to plan and conduct causal research in education how to analyze, present and interpret causal data, and the limits of causal understanding. Containing worked examples from both qualitative and quantitative research, Causation in Educational Research provides a manual for practice, underpinned by a rigorous analysis of key issues from philosophy, sociology and psychology. It will appeal to new and established researchers, readers of educational research, social science students and academics.
