Study Guide for Solomon/Martin/Martin/Berg's Biology, 10th

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that

highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Peterson's Guide to Graduate Programs in the Biological and Agricultural Sciences 1991

Zooplankton of the Atlantic and Gulf Coasts

This lively, richly illustrated text makes biology relevant and appealing, revealing it as a dynamic process of exploration and discovery. Portrays biologists as they really are—human beings—with motivations, misfortunes and mishaps much like everyone has. Encourages students to think critically, solve problems, apply biological principles to everyday life.

Peterson's Guide to Graduate Programs in the Biological and Agricultural Sciences 1989

The Development and Evaluation of an Introductory Biology Study Guide at the College Level

This best-selling text emphasizes the relationship between humans and other living things. Intended for an introductory course, this text provides students with a firm grasp of how their bodies function and how the human population can become more fully integrated into the biosphere. An Online Learning Center, tied directly to the text via icons, will direct students to activities or animations that gives a "visual example" of difficult processes as well as "Working Together" boxes to emphasize homeostasis.

Background Study

Zooplankton are critical to the vitality of estuaries and coastal waters. In this revised edition of Johnson and Allen's instant classic, readers are taken on a tour of the miniature universe of zooplankton, including early developmental stages of familiar and diverse shrimps, crabs, and fishes. Zooplankton of the Atlantic and Gulf Coasts details the behavior, morphology, and coloration of these tiny aquatic animals. Precise descriptions and labeled illustrations of hundreds of the most

commonly encountered species provide readers with the best source available for identifying zooplankton. Inside the second edition • an updated introduction that orients readers to the diversity, habitats, environmental responses, collection, history, and ecological roles of zooplankton • descriptions of life cycles • illustrations (including 88 new drawings) that identify 340-plus taxa and life stages • range, habits, and ecology for each entry located directly opposite the illustration • appendices with information on collection and observation techniques and citations of more than 1,300 scientific articles and books

This book is a wide-ranging introduction to Christian ethics that assumes no prior knowledge of the subject. It introduces a range of approaches to Christian moral reasoning and discusses numerous practical ethical issues. Throughout the book, ethical theory and practical ethics are integrated with one another, in order to show how each informs the other. Topics often neglected in Christian ethics are dealt with here, including Christian ethics and science and Christian ethics and pastoral care. Case studies and exercises give readers the opportunity to formulate their own responses to the moral issues discussed in the book, and to reflect on the sources of their own moral deliberation and action. Chapter bibliographies list print and web resources offering more detailed coverage of the topics introduced in the book.

Teacher's Study Guide on the Biology of Human Populations: Africa

Biology 110 General Biology Study Guide

Student Study Guide for Biology [by] Campbell/Reece

Factual and conceptual information dealing with the biology of human populations is offered in this guide for secondary science teachers. Instructional approaches are reviewed and suggestions are offered for use of the problem method approach, the discussion technique, and the project option. Information is organized into an introduction and five parts. The introduction described adaption possibilities and highlights basic ecological concepts and principles. The five parts focus on: (1) evolution of human populations (addressing the topics of genetics and evolution); (2) environment of human populations (synthesizing information on energy, atmosphere, water, soils, biota, oceans, nutrition, diseases, and mineral resources); (3) dynamics of human populations (identifying demographic parameters and population patterns); (4) reproduction in human populations (containing materials on human reproduction and sexual behavior); and (5) design for survival (discussing ecosystem management and control of environmental quality, fertility regulation, and humanity's future). Lists of reference readings are included after each of the parts. (ML)
