Ann Cameron's beloved and bestselling chapter book series about Julian, his brother Huey, and his friend Gloria all begins right here! Julian has a big imagination. And he is great at telling stories. He can make people—especially his younger brother, Huey—believe just about anything. Like the story about the cats that come in the mail. Or the fig leaves that make you grow tall if you eat them off the tree. But some stories can lead to a heap of trouble, and that's exactly where Julian and Huey end up! This book has been selected as a Common Core State Standards Text Exemplar (Grades 2-3, Stories) in Appendix B. This exciting SpringerBrief presents evidence for new ideas that will challenge several theories of how cancer biology is understood. Cancer biology has undergone several intellectual revolutions in the past 50 years. A mutation-centric view of cancer has given way to the tumor microenvironment view. Reductionistic studies of one gene at a time have given way to systems biology approaches that analyze the whole genome (omics) at the same time. However, this text combines the complex levels studying cancer at the molecular biology level, endocrinology level, and transcriptomics level. What researchers are now realizing is that there is a need to combine omics with physiology concepts in order to better understand cancer and this book will give insight to the merging of these two fields in order to define how cancer is studied in the future.
