This volume discusses latices in surface coatings in regards to emulsion paints. These water-based latices are playing a far greater role in many applications and match the growing concern over environmental safety. This book is available separately or as part of a 3-volume set and offers an insight into the advances and developments in this field. * Describes the principles of the formulation,

manufacture and application properties of water-based 'emulsion' paints and related surface coatings * Includes inter alia gloss and anti-corrosion paints and electrocoating As a comprehensive account of the science of polymer latices, these volumes are an invaluable resource for research workers and end-users in academia and industry working on water-based paints, adhesives, emulsions, dispersions and coatings.

Published by OpenStax College, U.S. History covers the breadth of the chronological history of the United States and also provides the necessary depth to ensure the course is manageable for instructors and students alike. U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class and gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience).

Wavelet Methods for Time Series Analysis

Andrew Rapo and Alex Michael explain all the important programming concepts from a designer's point of view, making them completely accessible to non-programmers. Completely revised and rewritten this second edition will help you develop professional ActionScript 2 applications, and communicate knowledgably about current, Object Oriented ActionScript 2 techniques. Divided into four sections to take you from novice to professional results: * Flash Fundamentals: Introduces the Flash authoring environment and basic core Flash concepts. * ActionScript 2 Fundamentals: Explains basic programming concepts and terminology, and shows how ActionScript 2 classes are constructed and used. * Built-in Classes: Describes the built-in ActionScript classes that are available for use in applications, including the MovieClip class, Key class, Sound class, etc. * Using ActionScript to Build a Game: Describes the development process for creating a complex Flash application

and presents commercial-quality game coding examples.

This introduction to wavelet analysis 'from the ground level and up', and to wavelet-based statistical analysis of time series focuses on practical discrete time techniques, with detailed descriptions of the theory and algorithms needed to understand and implement the discrete wavelet transforms. Numerous examples illustrate the techniques on actual time series. The many embedded exercises - with complete solutions provided in the Appendix - allow readers to use the book for self-guided study. Additional exercises can be used in a classroom setting. A Web site offers access to the time series and wavelets used in the book, as well as information on accessing software in S-Plus and other languages. Students and researchers wishing to use wavelet methods to analyze time series will find this book essential.

An Introduction to Quantum Physics

This ABA bestseller provides detailed guidance for compliance with the Lobbying Disclosure Act. It gives practical examples of how to be compliant, and covers all of the major federal statutes and regulations that govern the practice of federal lobbying. The book offers invaluable descriptions of the legislative and executive branch decision-making processes that lobbyists seek to influence, the constraints

that apply to lobbyist participation in political campaigns, grassroots lobbying, ethics issues, and more.

Nucleation in Condensed Matter

While there is a growing body of psycholinguistic experimental research on mappings between language and vision on a word and sentence level, there are almost no studies on how speakers perceive, conceptualise and spontaneously describe a complex visual scene on higher levels of discourse. This book explores the relationship between language, eye movements and cognition, and brings together discourse analysis with cognitively oriented behavioral research. Based on the analysis of data drawn from spoken descriptive discourse, spontaneous conversation, and experimental investigations, this work offers a comprehensive picture of the dynamic natures of language, vision and mental imagery. Verbal and visual data, synchronised and correlated by means of a multimodal scoring method, are used as two windows to the mind to show how language and vision, in concert, can elucidate covert mental processes.

The Yearbook reviews significant legal developments in international commerce and offers an important forum for legal practitioners to address and compare practical legal issues of direct interest in their areas of specialisation. Each volume features a comprehensive range of articles written for and by leading practitioners and advisors working within the international business sector. Volume 19 contains sections on: banking and finance company law trading practices general commercial issues The company law section addresses subjects such as liquidation, shareholding, and directors' rights and liabilities. Topics covered by the material on general commercial issues include the shipping of goods, timeshare agreements, forfeiture of property, standardized contracts, and intellectual property.

In Nucleation in Condensed Matter, key theoretical models for nucleation are developed and experimental data are used to discuss their range of validity. A central aim of this book is to enable the reader, when faced with a phenomenon in which nucleation appears to play a role, to determine whether nucleation is indeed important and to develop a quantitative and predictive description of the

nucleation behavior. The third section of the book examines nucleation processes in practical situations, ranging from solid state precipitation to nucleation in biological systems to nucleation in food and drink. Nucleation in Condensed Matter is a key reference for an advanced materials course in phase transformations. It is also an essential reference for researchers in the field. Unified treatment of key theories, experimental evaluations and case studies Complete derivation of key models Detailed discussion of experimental measurements Examples of nucleation in diverse systems

Linear Algebra

Linking is one of the challenges for theories of the syntax-semantics interface. In this new approach, the author explores the hypothesis that the positions of syntactic arguments are strictly determined by lexical argument geometry.

Through careful argumentation and original analysis, her study provides a framework for explaining the linking patterns of a range of verb classes, leading to a number of insights about lexical structure and a radical rethinking of many verb classes.

The Quebec Law Index Embracing All the Legislation of the Province of Quebec from 1867, Down to and Including the Year 1898

This book provides an introduction to the laws of the Middle East, defining the contours of a field of study that deserves to be called 'Middle Eastern law'. It introduces Middle Eastern law as a reflection of legal styles, many of which are shared by Islamic law and the laws of Christian and Jewish Near Eastern communities. It offers a detailed survey of the foundations of Middle Eastern Law, using court archives and an array of legal sources from the earliest records of Hammurabi to the massive compendia of law in the Islamic classical age through to the latest decisions of Middle Eastern high courts. It focuses on the way legislators and courts conceive of law and apply it in the Middle East. It builds on

the author's extensive legal practice, with the aim of introducing the Middle Eastern law's main sources and concepts in a manner accessible to non-specialist legal scholars and practitioners alike. The book begins with an exploration of the depth and variety of Middle Eastern law, introducing the concepts of shari'a, fiqh, and qanun, (which all mean 'law'), and dwelling on Islamic law as the 'common law' of the Middle East. It provides a historical introduction to the contemporary Middle East, exploring political systems, constitutional law, judicial review, the laws of tort and obligations, commercial law (including Islamic banking, company law, capital markets, and commercial arbitration); and examines legislative reform in family law and the position of women in the legal system. The author considers the interaction between Islamic and Western laws and includes a bibliography designed for further research into the jurisdictions and themes explored throughout the book.

The ever-increasing complexity and speed of digital circuits has considerably modified the architecture of integrated signal processing systems, resulting in the analog parts of the system being pushed towards the boundaries of the signal processing chain. The specification requirements of these analog interface circuits are becoming very strict, in order to fully benefit from the speed performance and the high dynamic range offered by digital circuits. Analog Interfaces for Digital

Signal Processing Systems analyzes the analog interfaces of a digital signal processing chain, and presents techniques to obtain maximum performance for various technologies and applications. The book serves as a general introduction and as a reference work in the fields of low-distortion analog circuits and oversampled data converters. It can also be used as the text for advanced courses covering these topics.

A History of the United States

While statistical arbitrage has faced some tough times?as markets experienced dramatic changes in dynamics beginning in 2000?new developments in algorithmic trading have allowed it to rise from the ashes of that fire. Based on the results of author Andrew Pole?s own research and experience running a statistical arbitrage hedge fund for eight years?in partnership with a group whose own history stretches back to the dawn of what was first called pairs trading?this unique guide provides detailed insights into the nuances of a proven investment strategy. Filled with in-depth insights and expert advice, Statistical Arbitrage contains comprehensive analysis that will appeal to both investors looking for an overview of this discipline, as well as quants looking for critical insights into modeling, risk management, and implementation of the strategy.

Discourse, Vision, and Cognition

This study argues that the domain traditionally covered by 'coordination' and 'subordination' in English can be subdivided into four distinct construction types. The constructions are defined on the basis of differences in their 'interpersonal' structure, i.e. the grammatical encoding of speaker-attitude and speaker-interlocutor interaction. It is shown that the four types constitute syntactically, semantically and pragmatically coherent categories, with differences in interpersonal structure defining and motivating distinct syntactic behaviour,

distinct pragmatic functions and distinct semantic classes of clause linkage. The validity of the analysis is demonstrated in three ways. First, it is shown that the analysis can make sense of the wide range of apparently conflicting criteria found in the literature on complex sentences, which can now be explained as reflections of four different construction types rather than as alternative perspectives on one single contrast between coordination and subordination. Second, it is shown how the analysis can deal with two specific problems in the more general area of clause combining, viz. the syntactic basis of the distinction between 'content', 'epistemic' and 'speech act' levels of clause linkage, and the distinct discursive functions associated with initial and final position of adverbial clauses. Finally, it is also shown that the proposed analysis is useful beyond the analysis of English, with parallels in a number of cross-linguistically recurrent phenomena of clause linkage. The book is mainly of interest to linguistics researchers in the areas of syntax, semantics and pragmatics as well as to graduate students with a focus on these fields.

Thoroughly updated to reflect CompTIA's Network+ N10-005 exam, Networking Essentials, Third Edition, is a practical, up-to-date, and hands-on guide to the basics of networking. Written from the viewpoint of a working network administrator, it requires absolutely no experience with either network concepts or day-to-day network management. Networking Essentials, Third Edition, includes expanded coverage of cabling, a new introduction to IPv6, and new chapters on basic switch configuration and troubleshooting. Its wireless and security chapters now focus strictly on introductory material, and you will also find up-to-date introductions to twisted-pair and fiber optic cabling, TCP/IP protocols, Internet and LAN interconnections, and basic network problem identification and resolution. Clear goals are outlined for each chapter, and every concept is introduced in easy to understand language that explains how and why networking technologies are used. Each chapter is packed with real-world examples and practical exercises that reinforce all concepts and guide you through using them to configure, analyze, and fix networks. Multimedia is changing the design of database and information retrieval systems. The accumulation of audio, image, and video content is of little use in these systems if the content cannot be retrieved on demand, a critical requirement that has led to the development of new technologies for the analysis and indexing of media data. In turn, these technologies seek to derive information or features from a data type that can facilitate rapid retrieval, efficient compression, and logical presentation of the data. Significant work that has not been addressed, however, is the benefits of analyzing more than one data type simultaneously. Computed Synchronization for Multimedia Applications presents a new framework for the simultaneous analysis of multiple media data objects. The primary benefit of this analysis is computed synchronization, a temporal and spatial alignment of multiple

media objects. Computed Synchronization for Multimedia Applications also presents several specific applications and a general structure for the solution of computed synchronization problems. The applications demonstrate the use of this structure. Two applications in particular are described in detail: the alignment of text to speech audio, and the alignment of simultaneous English language translations of ancient texts. Many additional applications are discussed as future uses of the technology. Computed Synchronization for Multimedia Applications is useful to researchers, students, and developers seeking to apply computed synchronization in many fields. It is also suitable as a reference for a graduate-level course in multimedia data retrieval.
