Designated a Doody's Core Title! While the scope of long-term care settings has expanded from nursing homes and home care agencies to assisted living facilities and community-based health services, the training for nurses, managers and administrators, medical directors, and other professionals who work in these facilities is often fragmented. This book was developed to fill a widely-recognized gap in the management and leadership skills of RNs needed to improve the quality

of long-term care. The book is based around learning modules in leadership and management competencies that were site-tested in three types of long-term care settings and revised based on the resulting feedback. Several of the nurse experts involved in the project contribute to this book. The leadership modules cover team building, communication, power and negotiation, change theory and process, management direction and design, and management that moves from conflict to collaboration. Two additional modules cover cultural competence and principles of teaching and learning related to adult education in the long-term care environment. Together, these skills will enhance the nurse's ability to build and interact with the geriatric care team, resolve conflict, negotiate for solutions, develop collaboration, and teach and mentor nurses and nursing assistants.

### **Patient Safety and Quality**

Since the late 1970s when Congressman Claude Pepper held widely publicized hearings on the mistreatment of the elderly, policy makers and practitioners have sought ways to protect older Americans from physical, psychological, and financial abuse. Yet, during the last 20 years fewer than 50 articles have addressed the

shameful problem that abusers "and sometimes the abused themselves" want to conceal. *Elder Mistreatment in an Aging America* takes a giant step toward broadening our understanding of the mistreatment of the elderly and recommends specific research and funding strategies that can be used to deepen it. The book includes a discussion of the conceptual, methodological, and logistical issues needed to create a solid research base as well as the ethical concerns that must be considered when working with older subjects. It also looks at problems in determination of a report's reliability and the role of physicians, EMTs, and others who are among the first to recognize situations of mistreatment. *Elder Mistreatment in an Aging America* will be of interest to anyone concerned about the elderly and ways to intervene when abuse is suspected, including family members, caregivers, and advocates for the elderly. It will also be of interest to researchers, research sponsors, and policy makers who need to know how to advance our knowledge of this problem.
