Invasion from the Planet of the Cows

Get Free Cows Save The Planet And Other Improbable Ways Of Restoring Soil To Heal Earth

Judith D Schwartz

The one thing Rose Trent, Dowager Countess of Bentley, ever wanted was freedom. Now it's within her grasp. Or it was, until she was kidnapped on the very first holiday she'd ever taken. What should have been traumatic has turned into the most adventurous time in her life, aided by a most unlikely Scot. Unfortunately, she only has a fortnight to thoroughly enjoy herself before her stepson shows up to pay the ransom. Laird Aiden MacGregor usually thinks through everything before taking action. Order is necessary to the running of a successful business and home. But, one simple rash action throws everything into disorder. He hadn't been the one to kidnap the delightful and beautiful Lady Bentley, but he'd be the one to pay the price. As such, he decides to spend the last days on Earth making everything right with his family, securing their future, and spending every moment he can with Rose before he swings from the gallows. With a word from her, or perhaps promise, his neck might be saved, but at what cost and is Rose willing to save him?

We Are the Weather

"Will one of the biggest and bloodiest economic wars of human history decide the future order of the global community?" Bartolomeu Capita's powerful book launches an in-depth exploration of this prescient question posed by Milo Rau, and though the truth might be painful, Capita's solution is enormously empowering. Digging into the disgraceful history of plunder and looting in the Congo Basin, *Save the Congo to Stop World War III* shines a much-needed light onto the sadistic hidden agenda behind the present plight of the region-and charts a bold course forward for Africans everywhere. Capita shows racism, exclusion, and theft of black heritage are the drivers of the violence and poverty plaguing the Congo and the perpetrators have assigned Angola-with its vast oil riches under the leadership of the puppet couple Isabel dos Santos and Sindika Dokolo-as the mercenary charged with exterminating the native population, leaving the natural resources free for the taking. Although the early stages of WWIII are in motion, it's not too late to change course. It is time for the black race to rise to the occasion and, through self-awareness and reempowerment, become the solution to creating a better world on a global scale.

Tackling Climate Change Through Livestock

For decades it has been nearly universal dogma among environmentalists that livestock--goats, sheep, and others, but especially cattle--are Public Enemy

Judith D. Schwartz

Number One. They erode soils, pollute air and water, damage riparian areas, and decimate wildlife populations. The UN's Food and Agriculture Organization bolstered the credibility of this notion with its 2007 report that declared livestock to be the single largest contributor to human-generated climate-change emissions. But is the matter really so clear cut? Hardly. In her new book, *Defending Beef*, environmental lawyer turned rancher Nicolette Hahn Niman argues that cattle are not inherently bad for the Earth. The impact of grazing can be either negative or positive, depending on how livestock are managed. In fact, with proper oversight livestock can actually play an essential role in maintaining grassland ecosystems by performing the same functions as the natural herbivores that once roamed and grazed there. She shows how dispersed, grass-based, smaller-scale farms can and should become the basis for American food production. And while no single book could definitively answer the thorny question of how to feed the Earth's growing population, *Defending Beef* makes the case that, whatever the world's future food system looks like, livestock can and must be part of the solution.

to their revitalization. Award-winning science journalist Judith D. Schwartz takes us first to China's Loess Plateau, where a landmark project has successfully restored a blighted region the size of Belgium, lifting millions of people out of poverty. She journeys on to Norway, where a young indigenous reindeer herder challenges the most powerful orthodoxies of conservation—and his own government. And in the Middle East, she follows the visionary work of an ambitious young American as he attempts to re-engineer the desert ecosystem, using plants as his most sophisticated technology. Schwartz explores regenerative solutions across a range of landscapes: deserts, grasslands, tropics, tundra, Mediterranean. She also highlights various human landscapes, the legacy of colonialism and industrial agriculture, and the endurance of indigenous knowledge. *The Reindeer Chronicles* demonstrates how solutions to seemingly intractable problems can come from the unlikeliest of places, and how the restoration of local water, carbon, nutrient, and energy cycles can play a dramatic role in stabilizing the global climate. Ultimately, it reveals how much is in our hands if we can find a way to work together and follow nature's lead.

devote ourselves to certain animals and then allow others to suffer needlessly, especially those slaughtered for our consumption. Social psychologist Melanie Joy explores the many ways we numb ourselves and disconnect from our natural empathy for farmed animals. She coins the term "carnism" to describe the belief system that has conditioned us to eat certain animals and not others. In *Why We Love Dogs, Eat Pigs, and Wear Cows*, Joy investigates factory farming, exposing how cruelly the animals are treated, the hazards that meatpacking workers face, and the environmental impact of raising 10 billion animals for food each year. Controversial and challenging, this book will change the way you think about food forever. "An absorbing examination of why humans feel affection and compassion for certain animals but are callous to the suffering of others." - Publishers Weekly "I think Gandhi would have loved *Why We Love Dogs, Eat Pigs, and Wear Cows*,. For this is a book that can change the way you think and change the way you live. It will lead you from denial to awareness, from passivity to action, and from resignation to hope." - John Robbins, author of *Diet for a New America* and *The Food Revolution*

fun. Dairy cows are featured with actual photos of cows lining up to get milked and the actual milking operation. It is udderly fascinating and educational! Since calves are so cute, there is an abundance of pictures of calves ranging from newborn to several weeks old. You'll learn what it takes for a newborn calf to be healthy. You will also get to see young people grooming and preparing their animals for show. These 4-H and FFA youngsters are learning what it takes to care for and even breed cattle. When show time comes you can see the results. The last section of this book shows how Werkoven Dairy and Qualco Energy have teamed up to provide an environmentally friendly farm that uses the manure to benefit farmers, fishermen, and families. "This book is a great learning tool." — Qualco Energy Board of directors For added enjoyment, a fun quiz is at the end of the book. Be careful, there may be some trick questions. Cows Save the Planet

In *We Are the Weather*, Jonathan Safran Foer explores the central global dilemma of our time in a surprising, deeply personal, and urgent new way. Some people reject the fact, overwhelmingly supported by scientists, that our planet is warming because of human activity. But do those of us who accept the reality of human-caused climate change truly believe it? If we did, surely we would be roused to act on what we know. Will future generations distinguish between

those who didn't believe in the science of global warming and those who said they accepted the science but failed to change their lives in response? The task of saving the planet will involve a great reckoning with ourselves—with our all-too-human reluctance to sacrifice immediate comfort for the sake of the future. We have, he reveals, turned our planet into a farm for growing animal products, and the consequences are catastrophic. Only collective action will save our home and way of life. And it all starts with what we eat—and don't eat—for breakfast.

Lady Admired

With a supernatural undercurrent, *The Fourth Marker* is the story of an elderly man, Gabriel Townsend, whose spirit is being crushed between the metaphoric anvil of his pragmatic views and the falling hammer of his wife's pending death. The story revolves around a family, the Townsends, whose heritage is partly Native American. The United States' Indian Removal Act of 1830, which resulted in the Trail of Tears episode in American history, required all indigenous people, with few exceptions, to leave their tribal lands in the southeast and east, along the eastern seaboard. Some Lenape (Delaware) tribal members on the Delmarva Peninsula as well as other areas in the east, defied the government and remained on their ancestral lands, hiding from authorities in the Great Pocomoke Forest, outlying islands, and swamps on the southern peninsula. A conscious decision to "hide in plain sight" or not, they eventually intermarried and bred with local whites, African-

Americans, and mulattoes. Many families whose ties to Delmarva date back a hundred years or more share a heritage with those aboriginal people; however, the prejudice and racial bias of a bygone era caused many to ignore – even deny – their lineage. In the story, while a child on the family farm during the Great Depression, Gabe Townsend rejected legends of his Native American ancestors and ignored miraculous cures of family members. Gabe's half-breed grandfather, Noopah, tried to teach him tribal legends and the old ways, explaining that, after most Indians had been killed or driven from their lands by the Army and settlers, tribal elders returned to their lands in spirit form after their deaths. They dwelled at a sacred hill on the family's land and protected their descendants from early death and white man's diseases. During those years, three family members were cured of life-threatening diseases, but Gabe's mother blindly credited their recoveries to the nascent field of modern medicine. After each recovery, a person of evil character and not of tribal blood disappeared, followed by the mysterious appearance of a wood marker on the sacred tribal hill. Yet, despite those events and Noopah's words, Gabe adhered to his mother's intractable views. Now facing the loss of his wife, he relives his childhood memories, guided by the spirit of his grandfather from beyond – well beyond – the grave. Finally understanding the truth of long ago, he decides to beg the tribal spirits to take his life in exchange for his wife's, aware that a fourth marker would signify his own life – and death. As Gabe's father noted, "some understand only what they see; others see only what they understand." The Fourth Marker highlights this most

human of vices against the backdrop of Native American legends with ample helpings of farm life during the Great Depression.

Why We Love Dogs, Eat Pigs, and Wear Cows: 10th Anniversary Edition

Told by the man who kicked off the infamous lawsuit between Oprah and the cattlemen, *Mad Cowboy* is an impassioned account of the highly dangerous practices of the cattle and dairy industries. Howard Lyman's testimony on *The Oprah Winfrey Show* revealed the deadly impact of the livestock industry on our well-being. It not only led to Oprah's declaration that she'd never eat a burger again, it sent shock waves through a concerned and vulnerable public. A fourth-generation Montana rancher, Lyman investigated the use of chemicals in agriculture after developing a spinal tumor that nearly paralyzed him. Now a vegetarian, he blasts through the propaganda of beef and dairy interests—and the government agencies that protect them—to expose an animal-based diet as the primary cause of cancer, heart disease, and obesity in this country. He warns that the livestock industry is repeating the mistakes that led to Mad Cow disease in England while simultaneously causing serious damage to the environment. Persuasive, straightforward, and full of the down-home good humor and optimism of a son of the soil, *Mad Cowboy* is both an inspirational story of personal transformation and a convincing call to action for a plant-based diet—for the good of the planet and the health of us all.

Cows for Kids Cow Fun and Facts

Carrying the Chalice Forward and Other Secret Stories of North America

From leading ecology advocates, a revealing look at our dependence on cows and a passionate appeal for sustainable living. In *Cowed*, globally recognized environmentalists Denis and Gail Boyer Hayes offer a revealing analysis of how our beneficial, centuries-old relationship with bovines has evolved into one that now endangers us. Long ago, cows provided food and labor to settlers taming the wild frontier and helped the loggers, ranchers, and farmers who shaped the country's landscape. Our society is built on the backs of bovines who indelibly stamped our culture, politics, and economics. But our national herd has doubled in size over the past hundred years to 93 million, with devastating consequences for the country's soil and water. Our love affair with dairy and hamburgers doesn't help either: eating one pound of beef produces a greater carbon footprint than burning a gallon of gasoline. Denis and Gail Hayes begin their story by tracing the co-evolution of cows and humans, starting with majestic horned aurochs, before taking us through the birth of today's feedlot farms and the threat of mad cow disease. The authors show how cattle farming today has depleted America's largest aquifer, created festering lagoons of animal waste, and drastically increased methane production. In their quest to find fresh solutions to our bovine problem, the authors take us to farms across the country from

Vermont to Washington. They visit worm ranchers who compost cow waste, learn that feeding cows oregano yields surprising benefits, talk to sustainable farmers who care for their cows while contributing to their communities, and point toward a future in which we eat less, but better, beef. In a deeply researched, engagingly personal narrative, Denis and Gail Hayes provide a glimpse into what we can do now to provide a better future for cows, humans, and the world we inhabit. They show how our relationship with cows is part of the story of America itself.

economics, politics, and people's food and lifestyle choices. But as anxiety mounts--and even as a swath of California farmland has been left fallow, and extremist groups worldwide exploit the desperation of people losing livelihoods to desertification--many are finding new routes to water security with key implications for food access, economic resilience, and climate change. Water does not perish, nor does it require millions of years to form as do fossil fuels. However water is always on the move and we must learn to work with its natural movement. In this timely, important book, Judith D. Schwartz presents a refreshing perspective on water that transcends zero-sum thinking. By allying with the water cycle, we can revive lush, productive landscapes, like the river in rural Zimbabwe that now flows miles further than it has in living memory thanks to restorative grazing; the fruit-filled food forest in Tucson, Arizona, grown by harvesting urban wastewater; or the mini-oasis in West Texas nourished by dew. Animated by stories from around the globe, *Water In Plain Sight* is an inspiring reminder that fixing the future of our drying planet involves understanding what makes natural systems thrive.

The journalist and author of *The Food Revolution* offers a collection of essays on food politics, sustainability, and revolution. With words like food additives, GMOs, and Big Food buzzing around, it's getting harder to choose what to eat. Even the most well-informed eaters could learn a thing or two about real food and the food system. Gathering and updating articles from his Huffington Post column, celebrated food politics journalist John Robbins presents his most recent observations along with never before published material. With commentaries on what we should and shouldn't eat, Robbins brings us to the frontlines of today's food revolution. From his undercover investigations of feedlots and slaughterhouses, to the slave trade behind chocolate and coffee, he gives readers a look into the importance of working for a more compassionate and environmentally responsible world. In *No Happy Cows*, you'll learn about:

- Greed and salmonella
- Soy and Alzheimer's
- Vitaminwater deception
- And much more!

No Happy Cows

A new edition of the book that launched Elizabeth Kolbert's career as an environmental writer--updated with three new chapters, making it, yet again, "irreplaceable" (Boston Globe). Elizabeth Kolbert's environmental classic *Field Notes from a Catastrophe* first developed out of a groundbreaking, National Magazine Award-winning three-part series in *The New Yorker*. She expanded it into a still-concise yet richly researched and damning book about climate change: a primer on the greatest challenge facing the world today. But in the years since, the story has continued to develop; the situation has become more dire, even as our understanding grows. Now, Kolbert returns to the defining book of her career. She has added a chapter bringing things up-to-date on the existing text, plus three new chapters--on ocean acidification, the tar sands, and a Danish town that's gone carbon neutral--making it, again, a must-read for our moment.

of meals from his childhood, and probe some of his most primal instincts about right and wrong. Brilliantly synthesizing philosophy, literature, science, memoir and his own detective work, *Eating Animals* explores the many fictions we use to justify our eating habits—from folklore to pop culture to family traditions and national myth—and how such tales can lull us into a brutal forgetting. Marked by Foer's profound moral ferocity and unvarying generosity, as well as the vibrant style and creativity that made his previous books, *Everything is Illuminated* and *Extremely Loud and Incredibly Close*, widely loved, *Eating Animals* is a celebration and a reckoning, a story about the stories we've told—and the stories we now need to tell.

Holistic Resource Management

It is always a pleasure to avoid responsibility and it gives me a feeling of relief to be able to announce that I am not wholly responsible for this collection. When it was suggested that I should put together the articles dealing with the Red Cow, and the other farm animals, I felt reluctant to trouble the public with a somewhat frivolous book at the present time. It seemed as if Fate were with me for when it was decided to go on with the book it was found that my file of clippings had been lost. But the matter was still urged and, remembering that at different times readers had written to me saying that they were in the habit of clipping the articles for future reference, I published a paragraph telling of my predicament. The result was that I received clippings from all parts of Canada and some were even sent from neighbouring

States. Through the kindness of my unknown friends I am able to offer a book which they have really edited. Some of the sketches used would have been rejected had I relied on my own judgment, but finding that they had pleased some readers I decided that they might please others. Having the chance to shift the responsibility for the book from my own shoulders, I accepted it joyously. The unknown friends who did me the honour of preserving these articles as they appeared are the real editors.

The Power of Light

"Within a day of receiving this book, I had consumed it Absorbing, moving, and compulsively readable."--Lydia Davis In this affectionate, heart-warming chronicle, Rosamund Young distills a lifetime of organic farming wisdom, describing the surprising personalities of her cows and other animals At her famous Kite's Nest Farm in Worcestershire, England, the cows (as well as sheep, hens, and pigs) all roam free. They make their own choices about rearing, grazing, and housing. Left to be themselves, the cows exhibit temperaments and interests as diverse as our own. "Fat Hat" prefers men to women; "Chippy Minton" refuses to sleep with muddy legs and always reports to the barn for grooming before bed; "Jake" has a thing for sniffing the carbon monoxide fumes of the Land Rover exhaust pipe; and "Gemima" greets all humans with an angry shake of the head and is fiercely independent. An organic farmer for decades, Young has an unaffected and homely voice. Her prose brims with genuine devotion to the wellbeing of

animals. Most of us never apprehend the various inner lives animals possess, least of all those that we might eat. But Young has spent countless hours observing how these creatures love, play games, and form life-long friendships. She imparts hard-won wisdom about the both moral and real-world benefits of organic farming. (If preserving the dignity of animals isn't a good enough reason for you, consider how badly factory farming stunts the growth of animals, producing unhealthy and tasteless food.) This gorgeously-illustrated book, which includes an original introduction by the legendary British playwright Alan Bennett, is the summation of a life's work, and a delightful and moving tribute to the deep richness of animal sentience.

The War Inside

The end of the world is only just the beginning. So eighteen-year-old Thea discovers when her solitary life on a dying Earth is shattered by a mysterious dream, a devastating choice, and a strange gift that propels her on a journey towards the restoration of all mankind. Thea is bitter and alone, just like everyone else left eking out an existence on a sunless, cloud-covered Earth. A terrifying dream convinces her to save the life of sixteen-year old Viviana, who has a deadly infection, as well as a freakish patch of glowing skin over her heart. When this light spreads to Thea, causing her palms to glow, she is forced to trust Caden, an arrogant, lazy, and annoyingly handsome boy she utterly despises. Caden has a map to the last city on Earth, and the only place that might

have a cure for both Viv's infection and the strange light on Thea's hands. As the trio embark on a journey through the barren wilderness, Thea and Caden discover, and try to fight, their mounting attraction to each other. Along the way they are joined by Rain, Naomi, and Enoch who explain that the light is not a curse, but a powerful gift meant to heal the polluted Earth and reconnect the remnants of humanity. When the group learns that Viv is the key to this planet-wide redemption, and that there are deadly shadows who will do anything to keep humans in the darkness forever, they each must make the difficult decision to help Viv fulfill her destiny and save the world. Don't miss *THE WAR INSIDE*, an exciting young adult dystopian/fantasy novel by debut author M. Kircher.

Goat science covers quite a wide range and varieties of topics, from genetics and breeding, via nutrition, production systems, reproduction, milk and meat production, animal health and parasitism, etc., up to the effects of goat products on human health. In this book, several parts of them are presented within 18 different chapters. Molecular genetics and genetic improvement of goats are the new approaches of goat development. Several factors affect the passage rate of digesta in goats, but for diet properties, goats are similar to other ruminants. Iodine deficiency in goats could be dangerous. Assisted reproduction

techniques have similar importance in goats like in other ruminants. Milk and meat production traits of goats are almost equally important and have significant positive impacts on human health. Many factors affect the health of goats, heat stress being of increasing importance. Production systems could modify all of the abovementioned characteristics of goats.

Taking Earth

You're either a Purple Cow or you're not. You're either remarkable or invisible. Make your choice. What do Apple, Starbucks, Dyson and Pret a Manger have in common? How do they achieve spectacular growth, leaving behind former tried-and-true brands to gasp their last? The old checklist of P's used by marketers - Pricing, Promotion, Publicity - aren't working anymore. The golden age of advertising is over. It's time to add a new P - the Purple Cow. Purple Cow describes something phenomenal, something counterintuitive and exciting and flat-out unbelievable. In his new bestseller, Seth Godin urges you to put a Purple Cow into everything you build, and everything you do, to create something truly noticeable. It's a manifesto for anyone who wants to help create products and services that are worth marketing in the first place.

Old Earth

We're told that if we care about our health—or our planet—eliminating red meat from our diets is crucial. That beef is bad for us and cattle farming is horrible

for the environment. But science says otherwise. Beef is framed as the most environmentally destructive and least healthy of meats. We're often told that the only solution is to reduce or quit red meat entirely. But despite what anti-meat groups, vegan celebrities, and some health experts say, plant-based agriculture is far from a perfect solution. In *Sacred Cow*, registered dietitian Diana Rodgers and former research biochemist and New York Times bestselling author Robb Wolf explore the quandaries we face in raising and eating animals—focusing on the largest (and most maligned) of farmed animals, the cow. Taking a critical look at the assumptions and misinformation about meat, *Sacred Cow* points out the flaws in our current food system and in the proposed “solutions.” Inside, Rodgers and Wolf reveal contrarian but science-based findings, such as: Meat and animal fat are essential for our bodies. A sustainable food system cannot exist without animals. A vegan diet may destroy more life than sustainable cattle farming. Regenerative cattle ranching is one of our best tools at mitigating climate change. You'll also find practical guidance on how to support sustainable farms and a 30-day challenge to help you transition to a healthful and conscientious diet. With scientific rigor, deep compassion, and wit, Rodgers and Wolf argue unequivocally that meat (done right) should have a place on the table. It's not the cow, it's the how!

Clair, old Masonic and Templar original root families, of many different noble families, my curiosity to remove the veil between the old world and the new drove me to dig very deep. My internal question of "what is there in a name?" inspired me to keep searching until I finally discovered that our own family is a direct paternal descendant of the King of Tara (all Ireland) from 832 to 846. We apparently were hidden away so our uncle, the King of the Picts and of Scotland, as well as others, could not molest our heritage. This book is a bit of the summary of some of these discoveries and other teachings and understandings from our families. Following the root of related names with the help of DNA and other research we will hopefully unravel an astounding mystery that should impact many hundreds of families in their understanding of who they truly are and what their real responsibilities are in carrying the chalice forward.

Greenhouse gas emissions by the livestock sector could be cut by as much as 30 percent through the wider use of existing best practices and technologies. FAO conducted a detailed analysis of GHG emissions at multiple stages of various livestock supply chains, including the production and transport of animal feed, on-farm energy use, emissions from animal digestion and manure decay, as well as the post-slaughter transport, refrigeration and packaging of animal products. This report represents the most comprehensive estimate made to-date of livestock

contribution to global warming as well as the sectors potential to help tackle the problem. This publication is aimed at professionals in food and agriculture as well as policy makers.

Cows of Our Planet

Mindy Moo Cow lives on smiling face farm with her friends David Dog, Cindy Cat, Pasty Pony and Jeff Jackrabbit. When three little ducklings disobey their mother and leave the safety of the pond, danger follows them every step of the way. It's up to Mindy and the farm animals to rescue them before it's too late.

In *Cows Save the Planet*, journalist Judith D. Schwartz looks at soil as a crucible for our many overlapping environmental, economic, and social crises. Schwartz reveals that for many of these problems—climate change, desertification, biodiversity loss, droughts, floods, wildfires, rural poverty, malnutrition, and obesity—there are positive, alternative scenarios to the degradation and devastation we face. In each case, our ability to turn these crises into opportunities depends on how we treat the soil. Drawing on the work of thinkers and doers, renegade scientists and institutional whistleblowers from around the world, Schwartz challenges much of the conventional thinking about global warming and other problems. For example, land can suffer from undergrazing as well as overgrazing, since certain landscapes, such as

grasslands, require the disturbance from livestock to thrive. Regarding climate, when we focus on carbon dioxide, we neglect the central role of water in soil—"green water"—in temperature regulation. And much of the carbon dioxide that burdens the atmosphere is not the result of fuel emissions, but from agriculture; returning carbon to the soil not only reduces carbon dioxide levels but also enhances soil fertility. *Cows Save the Planet* is at once a primer on soil's pivotal role in our ecology and economy, a call to action, and an antidote to the despair that environmental news so often leaves us with.
