The Fractal Organization

The 4-volume set LNCS 11632 until LNCS 11635 constitutes the refereed proceedings of the 5th International Conference on Artificial Intelligence and Security, ICAIS 2019, which was held in New York, USA, in July 2019. The conference was formerly called “International Conference on Cloud Computing and Security” with the acronym ICCCS. The total of 230 full papers presented in this 4-volume proceedings was carefully reviewed and selected from 1529 submissions. The papers were organized in topical sections as follows: Part I: cloud computing; Part II: artificial intelligence; big data; and cloud computing and security; Part III: cloud computing and security; information hiding; IoT security; multimedia forensics; and encryption and cybersecurity; Part IV: encryption and cybersecurity.

Thermal Management for LED Applications

This book showcases cutting-edge research papers from the 5th International Conference on Research into Design – the largest in India in this area – written by eminent researchers from across the world on design process, technologies, methods and tools, and their impact on innovation, for supporting design across boundaries. The special features of the book are the variety of insights into the product and system innovation process, and the host of methods and tools from all major areas of design research for the enhancement of the innovation process. The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area, with the largest collection of research from India. For practitioners and educators, it is exposure to an empirically validated suite of theories, models, methods and tools that can be taught and practiced for design-led innovation.

This book details flexible glass properties that enable use in emerging electronic and opto-electronic applications. Discussion includes flexible glass advantages compared to alternative substrate materials. Examples describe flexible glass in processes such as vacuum deposition, monolithic integration, printing, and roll-to-roll. Flexible glass demonstrations in emerging applications such as

photovoltaics, flexible displays, and optical interconnects are also detailed. The reader will find in this unique book: Discussion of flexible glass processing and mechanical reliability. Demonstration of flexible glass in roll-to-roll (R2R) fabrication processes. Flexible glass substrate examples in displays, sensors, and photovoltaics. Flexible glass ecosystem description for identification of new applications.

Next Generation HALT and HASS presents a major paradigm shift from reliability prediction-based methods to discovery of electronic systems reliability risks. This is achieved by integrating highly accelerated life test (HALT) and highly accelerated stress screen (HASS) into a physics-of-failure-based

robust product and process development methodology. The new methodologies challenge misleading and sometimes costly mis-application of probabilistic failure prediction methods (FPM) and provide a new deterministic map for reliability development. The authors clearly explain the new approach with a logical progression of problem statement and solutions. The book helps engineers employ HALT and HASS by illustrating why the misleading assumptions used for FPM are invalid. Next, the application of HALT and HASS empirical discovery methods to quickly find unreliable elements in electronics systems gives readers practical insight to the techniques. The physics of HALT and HASS methodologies are highlighted, illustrating how they uncover and isolate software failures due to hardware-software interactions in digital systems. The use of empirical operational stress limits for the development of future tools and reliability discriminators is described. Key features: * Provides a clear basis for moving from statistical reliability prediction models to practical methods of insuring and improving reliability. * Challenges existing failure prediction methodologies by highlighting their limitations using real field data. * Explains a practical approach to why and how HALT and HASS are applied to electronics and electromechanical systems. * Presents opportunities to develop reliability test discriminators for prognostics using empirical stress limits. * Guides engineers and managers on the benefits of the deterministic and more efficient methods of HALT and HASS. * Integrates the empirical limit discovery methods of HALT and HASS into a physics of failure based robust product and process

development process.

Fundamentals of Physical Chemistry is the signature compilation of the class tested notes of iconic chemistry coach Ananya Ganguly. Her unique teaching methodology and authoritative approach in teaching of concepts, their application and strategy is ideal for preparing for the IITJEE examinations. The author's impeccable command and the authority on each foray of chemistry teaching are visible in each chapter and the chapter ending exercises. Each chapter unfolds the structured, systematic and patterned chemistry concepts in lucid and student friendly approach. The book is without those unnecessary frills that make the bulk in other popular books in the market for the IITJEE. An indispensable must have for in-depth comprehension of Chemistry for the coveted IITJEE.

Global and Regional Leadership of BRICS Countries

As the importance and dependence of specific mineral commodities increase, so does concern about their supply. The United States is currently 100 percent

reliant on foreign sources for 20 mineral commodities and imports the majority of its supply of more than 50 mineral commodities. Mineral commodities that have important uses and face potential supply disruption are critical to American economic and national security. However, a mineral commodity's importance and the nature of its supply chain can change with time; a mineral commodity that may not have been considered critical 25 years ago may be critical today, and one considered critical today may not be so in the future. The U.S. Geological Survey has produced this volume to describe a select group of mineral commodities currently critical to our economy and security. For each mineral commodity covered, the authors provide a comprehensive look at (1) the commodity's use; (2) the geology and global distribution of the mineral deposit types that account for the present and possible future supply of the commodity; (3) the current status of production, reserves, and resources in the United States and globally; and (4) environmental considerations related to the commodity's production from different types of mineral deposits. The volume describes U.S. critical mineral resources in a global context, for no country can be self-sufficient for all its mineral commodity needs, and the United States will always rely on global mineral commodity supply chains. This volume provides the scientific understanding of critical mineral resources required for informed decisionmaking by those responsible for ensuring that the United States has a secure and sustainable supply of mineral commodities.

Knowledge creation and technological experiences resulting from modern production life cycles are definitely the most Economical and important intellectual capitals in the current manufacturing endeavors. These are also the basis for enabling industrial competition through managing and identifying organizational and product related needs and opportunities; e. g. health care systems society needs clean environment, sustainable production life cycles needs flexible approachable design and engineering of materials whilst valuable materials are needed for renewable energies and the production of fuel cells. Integration of components, design of structures and managing knowledge inherent in engineering is a difficult and complex endeavor. A wide range of advanced technologies such as smart materials and their approaches in alternative energy have to be invoked in providing assistance for knowledge requirements ranging from acquisition, modeling, (re)using, retrieving, sharing, publishing and maintaining of knowledge. Integration, Design and management with regards to knowledge

management originates at least on three roots.

Oswaal NEET Question Bank Chapterwise & Topicwise Class 12 Physics (For March 2020 Exam)

This book presents a systematic collation of the regional and global dimensions of the leadership role of BRICS countries (Brazil, Russia, India, China and South Africa). It analyses the rising regional and global leadership of BRICS, using specific benchmarks to gauge the nature of this leadership. The elements examined include willingness to lead, the capacity to do as much, and the degree to which the given actor is accepted as a leader both within and beyond its region. The chapters in the book capture the nature of trends in regional and global leadership within the contexts of a changing international order. It is taken for granted that Brazil, Russia, India, China and South Africa are now engineering a unique pool of governance that is seeking alternatives to the current order of global economic and political affairs. The fact that these countries have jointly decided to forge ahead with the BRICS constellation of states that is now taking consequential decisions such as the creation of the BRICS' New Development Bank, is not to be treated lightly. In this book the majority of papers take a step back and systematically analyse the real state of the leadership that is provided by the BRICS on a litany of regionally and globally relevant issues. While no one doubts the fact that these countries have the capacity to provide leadership especially in their various regions on many issues,

what remains moot is whether they are willing and capable to do so at the global level. Even in those cases where there is the willingness and capacity, the book argues that the acceptance of such leadership by potential followers is not always a given.

Innovative Developments in Virtual and Physical Prototyping

The tremendous impact of electronic devices on our lives is the result of continuous improvements of the billions of nanoelectronic components inside integrated circuits (ICs). However, ultra-scaled semiconductor devices require nanometer control of the many parameters essential for their fabrication. Through the years, this created a strong alliance between microscopy techniques and IC manufacturing. This book reviews the latest progress in IC devices, with emphasis on the impact of electrical atomic force microscopy (AFM) techniques for their development. The operation principles of many techniques are introduced, and the associated metrology challenges described. Blending the expertise of industrial specialists and academic researchers, the chapters are dedicated to various AFM methods and their impact on the development of emerging nanoelectronic devices. The goal is to introduce the major electrical AFM methods, following the journey that has seen our lives changed by the advent of ubiquitous nanoelectronics devices, and has extended our capability to sense matter on a scale previously inaccessible.

Robot Learning from Human Teachers

This open access book summarizes the results of the European research project “Twin-model based virtual manufacturing for machine tool-process simulation and control” (Twin-Control). The first part reviews the applications of ICTs in machine tools and manufacturing, from a scientific and industrial point of view, and introduces the Twin-Control approach, while Part 2 discusses the development of a digital twin of machine tools. The third part addresses the monitoring and data management infrastructure of machines and manufacturing processes and numerous applications of energy monitoring. Part 4 then highlights various features developed in the project by combining the developments covered in Parts 3 and 4 to control the manufacturing processes applying the so-called CPSs. Lastly, Part 5 presents a complete validation of Twin-Control features in two key industrial sectors: aerospace and automotive. The book offers a representative overview of the latest trends in the manufacturing industry, with a focus on machine tools. .

Family Communication carefully examines state-of-the-art research and theories of family communication and family relationships. In addition to

presenting cutting-edge research, it focuses on classic theories and research findings that have influenced and revolutionized the way scholars conceptualize family interaction. This text offers a thorough and up-to-date presentation of scientific research in family communication for both teachers and students of family communication as well as professionals who work with families. This second edition features: Chapters updated with the latest research, including over 2000 references. Material on understudied family relationships, such as extended family relationships and gay and lesbian relationships Recent research on understudied topics in family communication, including the influence of technology on mate selection, negotiating work and family stress, single parenting, cohabitation, elder abuse, forgiveness in marriage, and the links among communication, culture, and mental health. A revised chapter on parent-child communication, taking a lifespan perspective that helps organize the large body of research in this area. A new chapter devoted to extended family relationships, with special focus on grandparent-grandchild relationships, in-law relationships, and adult children and their parents. An expanded review of family conflict processes, especially in relation to decision making and power. A companion website provides chapter outlines, exam questions, and PowerPoint slides for students and instructors. Undergraduate readers should find the information easy to understand, while advanced readers, such as graduate students and professionals, will find it a useful reference to classic and contemporary research on family communication and relationships.

The global development community is teeming with different ideas and interventions to improve the lives of the world's poorest people. Whether these succeed in having a transformative impact depends not just on their individual brilliance but on whether they can be brought to a scale where they reach millions of poor people. *Getting to Scale* explores what it takes to expand the reach of development solutions beyond an individual village or pilot program so they serve poor people everywhere. Each chapter documents one or more contemporary case studies, which together provide a body of evidence on how scale can be pursued. The book suggests that the challenge of scaling up can be divided into two solutions: financing interventions at scale, and managing delivery to large numbers of beneficiaries. Neither governments, donors, charities, nor corporations are usually capable of overcoming these twin challenges alone, indicating that partnerships are key to success. Scaling up is mission critical if extreme poverty is to be vanquished in our lifetime. *Getting to Scale* provides an invaluable resource for development practitioners, analysts, and students on a topic that remains largely unexplored and poorly understood. The National Eligibility cum Entrance Test (NEET) is conducted every year to grant admission to aspirants into MBBS / BDS courses across the country. From 2020 onwards, NEET is conducted by the National Testing Agency (NTA). Earlier, it was known as All India Pre-Medical Test (AIPMT) and was conducted by the Central Board of Secondary Education (CBSE). The Medical Council of India (MCI) has recommended the syllabus for NEET after review of various State syllabi as well as those prepared by CBSE, NCERT and COBSE. This was done to establish uniformity across the country keeping in view the relevance of different areas in Medical Education. NEET is held every year in the month of May. In the final test paper, there are total 180 questions with 45 questions from Physics, 45 questions from Chemistry and 90 questions from Biology (45 questions from Botany + 45 questions from Zoology). It is observed that most of the questions asked are based on chapters from NCERT textbooks. With the motto of Learning Made Simple, Oswaal Books have developed NEET Question Banks for all the aspirants who wish to crack NEET and come out with flying colors. The Question Banks are a compilation of questions from the last 32 Years' Question Papers of AIPMT to enable exam oriented

preparation. Interfacial Compatibility in Microelectronics

This book presents the scientific principles, processing conditions, probable failure mechanisms, and a description of reliability performance and equipment required for implementing high-temperature and lead-free die attach materials. In particular, it addresses the use of solder alloys, silver and copper sintering, and transient liquid-phase sintering. While different solder alloys have been used widely in the microelectronics industry, the implementation of sintering silver and transient liquid-phase sintering remains limited to a handful of companies. Hence, the book devotes many chapters to sintering technologies, while simultaneously providing only a cursory coverage of the more widespread techniques employing solder alloys. Addresses the differences

between sintering and soldering (the current die-attach technologies), thereby comprehensively addressing principles, methods, and performance of these high-temperature die-attach materials; Emphasizes the industrial perspective, with chapters written by engineers who have hands-on experience using these technologies; Baker Hughes, Bosch and ON Semiconductor, are represented as well as materials suppliers such as Indium; Simultaneously provides the detailed science underlying these technologies by leading academic researchers in the field.

Interfaces between dissimilar materials are met everywhere in microelectronics and microsystems. In order to ensure faultless operation of these highly sophisticated structures, it is mandatory to have fundamental understanding of materials and their interactions in the system. In this difficult task, the “traditional” method of trial and error is not feasible anymore; it takes too much time and repeated efforts. In *Interfacial Compatibility in Microelectronics*, an alternative approach is introduced. In this revised method four fundamental disciplines are combined: i) thermodynamics of materials ii) reaction kinetics iii) theory of microstructures and iv) stress and strain analysis. The advantages of the method are illustrated in *Interfacial Compatibility in*

Microelectronics which includes: solutions to several common reliability issues in microsystem technology, methods to understand and predict failure mechanisms at interfaces between dissimilar materials and an approach to DFR based on deep understanding in materials science, rather than on the use of mechanistic tools, such as FMEA. Interfacial Compatibility in Microelectronics provides a clear and methodical resource for graduates and postgraduates alike.

Learning from Demonstration (LfD) explores techniques for learning a task policy from examples provided by a human teacher. The field of LfD has grown into an extensive body of literature over the past 30 years, with a wide variety of approaches for encoding human demonstrations and modeling skills and tasks. Additionally, we have recently seen a focus on gathering data from non-expert human teachers (i.e., domain experts but not robotics experts). In this book, we provide an introduction to the field with a focus on the unique technical challenges associated

with designing robots that learn from naive human teachers. We begin, in the introduction, with a unification of the various terminology seen in the literature as well as an outline of the design choices one has in designing an LfD system. Chapter 2 gives a brief survey of the psychology literature that provides insights from human social learning that are relevant to designing robotic social learners. Chapter 3 walks through an LfD interaction, surveying the design choices one makes and state of the art approaches in prior work. First, is the choice of input, how the human teacher interacts with the robot to provide demonstrations. Next, is the choice of modeling technique. Currently, there is a dichotomy in the field between approaches that model low-level motor skills and those that model high-level tasks composed of primitive actions. We devote a chapter to each of these. Chapter 7 is devoted to interactive and active learning approaches that allow the robot to refine an existing task model. And finally, Chapter 8 provides best practices for evaluation of LfD systems, with a focus on how to approach experiments with human subjects in this domain.

The world of management is in crisis - the old remedies no longer work and organizations are failing at an increasing rate. Although many talk of 'joined up thinking', few offer practical guidance on how to achieve this in organizations. The Fractal Organization

sets down the practical implications of a well tested systemic approach to building organizations that are capable of surviving and flourishing in these turbulent times. "An excellent read Many organizations fail at the mercy of their own ignorance. The author has done an excellent job in making 'the science of effective organization' accessible to management, providing them with a new knowledge to deal with the uncertainties that the markets place upon them." Stephen J. Brewis, Business Architect, British Telecom "one of the most interesting, thorough and rigorous guides to management that I have ever read, introduces new insights in every chapter carries a credibility which acts as a counterbalance to the sometimes difficult message which he conveys which is that a lot of mainstream management practice is at best ineffective and at worst downright destructive. I would recommend this book to anyone interested in management or systems thinking." Penny Marrington, Course Chair, Systems Group, Open University "In my opinion this book manages to present sound academic theory that is relevant and helpful to the practitioner in the business. I experienced several A-HA moments." Pauline Marsh, Strategy Director, CS&S International, BAE SYSTEMS "The insights of the Viable System Model have been open only to a select few for much too long. Hoverstadt has gone furthest in bringing these ideas to a wider audience Management books have too often been serious but not practical, or practical but not serious. This book is both brilliantly serious and practical, and often entertaining too." Professor Peter Kawalak, Manchester Business School "Integrates mainstream management ideas with the systems ideas

underpinning the VSM, and flows and reads well. As a starting point for developing understanding of the VSM in today's world this book improves greatly on all books that have gone before, I would certainly recommend it to colleagues, clients, and students." Dr. Robin Asby, Course Chair, Communication and Systems, Open University

ICoRD'15 - Research into Design Across Boundaries Volume 1

The latest ideas in machine analysis and design have led to a major revision of the field's leading handbook. New chapters cover ergonomics, safety, and computer-aided design, with revised information on numerical methods, belt devices, statistics, standards, and codes and regulations. Key features include: *new material on ergonomics, safety, and computer-aided design; *practical reference data that helps machines designers solve common problems--with a minimum of theory. *current CAS/CAM applications, other machine computational aids, and robotic applications in machine design. This definitive machine design handbook for product designers, project engineers, design engineers, and manufacturing engineers covers every aspect of machine construction and operations. Voluminous and heavily illustrated, it discusses standards, codes and regulations; wear; solid materials, seals; flywheels; power screws; threaded fasteners; springs; lubrication; gaskets; coupling; belt drive; gears; shafting; vibration and control; linkage; and corrosion.

Surface Tension in Microsystems

In this book, internationally respected scholars from the disciplines of educational science, business administration and psychology thoroughly discuss practice-related questions on learning transfer in organizations. Readers will learn solid concepts for securing and evaluating learning transfer. This volume offers new insights about learning transfer in organizations and their implications for both research and practice. It examines the actual state in practice and provides the foundation for improvements in the design and evaluation of further training measures that are conducive to the transfer of learning. In addition, coverage details theoretical models on learning transfer in further vocational training and develops concepts that enable the transfer of learning for further training in organizations. The book also evaluates further training measures on different levels on the basis of relevant criteria.

This book describes how surface tension effects can be used by engineers to provide mechanical functions in miniaturized products (1 mm). Even if precursors of this field such as Jurin or Laplace already date back to the 18th century, describing surface tension effects

from a mechanical perspective is very recent. The originality of this book is to consider the effects of capillary bridges on solids, including forces and torques exerted both statically and dynamically by the liquid along the 6 degrees-of-freedom. It provides a comprehensive approach to various applications, such as capillary adhesion (axial force), centering force in packaging and micro-assembly (lateral force) and recent developments such as a capillary motor (torque).

Biology for NEET comprises a comprehensive set of question and answers based on current trends in the NEET. Strictly following the NCERT course/chapter structure, the book aims at preparing the students for competing in the medical entrance examinations in a better way. For convenience and to plan for the examinations effectively, questions have been arranged both chapter-wise and topic-wise, and explanation have been provided for answers. Further, to assess the students' level of preparation, Advanced Level Questions (ALQs) and Assertion-Reason Questions have been provided in each chapter. Also, the book has numerous previous years' questions to brush-up their knowledge.

Masters Theses in the Pure and Applied Sciences

This proceedings book presents selected peer-reviewed papers from the 9th International Workshop on 'Service Oriented, Holonic and Multi-agent Manufacturing Systems for the Industry of the Future' organized by Universitat Politècnica de València, Spain, and held on October 3-4, 2019. The SOHOMA 2019 Workshop aimed to foster innovation in the digital transformation of manufacturing and logistics by promoting new concepts and methods and solutions through service orientation in holonic and agent-based control with distributed intelligence. The book provides insights into the theme of the SOHOMA'19 Workshop - 'Smart anything everywhere - the vertical and horizontal manufacturing integration, ' addressing 'Industry of the Future' (IoF), a term used to describe the 4th industrial revolution initiated by a new generation of adaptive, fully

connected, analytical and highly efficient robotized manufacturing systems. This global IoF model describes a new stage of manufacturing, that is fully automatized and uses advanced information, communication and control technologies such as industrial IoT, cyber-physical production systems, cloud manufacturing, resource virtualization, product intelligence, and digital twin, edge and fog computing. It presents the IoF interconnection of distributed manufacturing entities using a 'system-of-systems' approach, discussing new types of highly interconnected and self-organizing production resources in the entire value chain; and new types of intelligent decision-making support based on from real-time production data collected from resources, products and machine learning processing. This book is intended for researchers and engineers working in the manufacturing value chain, and specialists developing computer-based control and robotics solutions for the 'Industry of the Future'. It is also a valuable resource for master's and Ph.D. students in engineering sciences programs.

Thermal Management for LED Applications provides state-of-the-art information on recent developments in thermal management as it relates to LEDs and LED-based systems and their applications. Coverage begins with an overview of the basics of thermal management including thermal design for LEDs, thermal characterization and testing of LEDs, and issues related to failure mechanisms and reliability

and performance in harsh environments. Advances and recent developments in thermal management round out the book with discussions on advances in TIMs (thermal interface materials) for LED applications, advances in forced convection cooling of LEDs, and advances in heat sinks for LED assemblies.

Environmentally-Benign Energy Solutions

Innovative Developments in Virtual and Physical Prototyping presents essential research in the area of Virtual and Rapid Prototyping. The volume contains reviewed papers presented at the 5th International Conference on Advanced Research in Virtual and Rapid Prototyping, hosted by the Centre for Rapid and Sustainable Product Development of the Polytechnic Institute of Leiria, Portugal, from September 28 to October 1, 2011. A wide range of topics is covered, such as CAD and 3D Data Acquisition Technologies, Additive and Nano Manufacturing Technologies, Rapid Tooling & Manufacturing, Biomanufacturing, Materials for Advanced Manufacturing Processes, Virtual Environments and Simulation, Applications of Virtual and Physical Prototyping Technologies. Innovative Developments in Virtual and Physical Prototyping is intended for engineers, designers and manufacturers who are active in the areas of mechanical, industrial and biomedical engineering.

Biology for NEET Volume-2 (Objective Series)

This book provides high-quality research results and

proposes future priorities for more sustainable development and energy security. It covers a broad range of topics on atmospheric changes, climate change impacts, climate change modeling and simulations, energy and environment policies, energy resources and conversion technologies, renewables, emission reduction and abatement, waste management, ecosystems and biodiversity, and sustainable development. Gathering selected papers from the 7th Global Conference on Global Warming (GCGW2018), held in Izmir, Turkey on June 24–28, 2018, it: Offers comprehensive coverage of the development of systems taking into account climate change, renewables, waste management, chemical aspects, energy and environmental issues, along with recent developments and cutting-edge information Highlights recent advances in the area of energy and environment, and the debate on and shaping of future directions and priorities for a better environment, sustainable development and energy security Provides a number of practical applications and case studies Is written in an easy-to-follow style, moving from the basics to advanced systems. Given its scope, the book offers a valuable resource for readers in academia and industry alike, and can be used at the graduate level or as a reference text for professors, researchers and engineers.

Ultra-thin Chip Technology and Applications

Ultra-thin chips are the "smart skin" of a conventional silicon chip. This book shows how very thin and

flexible chips can be fabricated and used in many new applications in microelectronics, Microsystems, biomedical and other fields. It provides a comprehensive reference to the fabrication technology, post processing, characterization and the applications of ultra-thin chips.

The ELFNET Book on Failure Mechanisms, Testing Methods, and Quality Issues of Lead-Free Solder Interconnects is the work of the European network ELFNET which was founded by the European Commission in the 6th Framework Programme. It brings together contributions from the leading European experts in lead-free soldering. The limited validity of testing methods originating from tin-lead solder was a major point of concern in ELFNET members' discussions. As a result, the network's reliability group decided to bring together the material properties of lead-free solders, as well as the basics of material science, and to discuss their influence on the procedures for accelerated testing. This has led to a matrix of failure mechanisms and

their activation and, as a result, to a comprehensive coverage of the scientific background and its applications in reliability testing of lead-free solder joints. The ELFNET Book on Failure Mechanisms, Testing Methods, and Quality Issues of Lead-Free Solder Interconnects is written for scientists, engineers and researchers involved with lead-free electronics.
