Wildlife conservationist and photographer Sam Trull's world

changed forever when she gave up her comfortable life in the United States for the wilds of Costa Rica. After almost twenty years of working with animals, one creature in particular had captured her heart: the sloth. In her stunning photo series, *Slothlove*, Sam shares intimate portraits of these captivating and endearing animals from her unique perspective as their protector, mother, and friend. Sam not only found her life's work among her beloved sloths; she also found comfort, friendship, and inspiration after having suffered a devastating loss. Woven in with these images are unforgettable stories of heartbreak and survival, as well as interesting facts about these intelligent and beautiful creatures. *Slothlove* is an unforgettable journey into the trees of the Costa Rican rainforest and a moving portrait of the profound connection between humans and animals.

What is the role of the material world in shaping the tensions and paradoxes of imperial sovereignty? Scholars have long shed light on the complex processes of conquest, extraction, and colonialism under imperial rule. But imperialism has usually been cast as an exclusively human drama, one in which the world of matter does not play an active role. Lori Khatchadourian argues instead that

things—from everyday objects to monumental buildings—profoundly shape social and political life under empire. Out of the archaeology of ancient Persia and the South Caucasus, Imperial Matter advances powerful new analytical approaches to the study of imperialism writ large and should be read by scholars working on empire across the humanities and social sciences.

Healthcare and Biomedical Technology in the 21st Century

The complete guide to the many uses and benefits of colloidal silver • Explains how to use colloidal silver to boost immunity, reduce inflammation, and treat 80 common diseases and conditions, including eczema, acne, thrush, flu, asthma, hay fever, mastitis, canker sores, gingivitis, and conjunctivitis • Details the correct dosages and applications of colloidal silver, including the proper “parts per million” (ppm) for acute treatments and daily use • Debunks concerns about colloidal silver and argyria, the “blue man” phenomena associated with silver intake • Looks at the latest scientific studies from UCLA Medical Center, Temple University, and other well-known institutions Colloidal silver was widely used as a natural antibiotic and antiviral until the mid-20th century when its use was overshadowed by the development of pharmaceutical antibiotics. Now with the rise of antibiotic-resistant infections, colloidal silver has reentered the sights of medical researchers, alternative health practitioners, and those looking to take control of their own health. In this practical

guide, the authors explore the many uses and benefits of colloidal silver for boosting immunity, reducing pain and inflammation, and treating more than 80 common diseases and conditions, including eczema, acne, thrush, flu, asthma, hay fever, mastitis, canker sores, gingivitis, and conjunctivitis. Citing scientific studies from UCLA Medical Center, Temple University, and other well-known institutions, they reveal how colloidal silver works against bacteria, viruses, and fungi, including strep, staph, and candida, often in a matter of minutes. They examine how it accelerates the healing of cuts and bruises and how it can also be used to treat our animal companions. They explore its use, with no side effects, in the treatment of diseases of the eyes, skin, mouth, respiratory tract, and digestive tract as well as in the treatment of cancer. Debunking concerns about colloidal silver and argyria, the “blue man” phenomena associated with silver intake, the authors detail the correct dosages and applications of colloidal silver, including the proper “parts per million” (ppm) concentration for each ailment and for daily use. They explain what to look for when purchasing colloidal silver as well as how to make it at home. They also explore the long history of silver in folk medicine, including its use by Hildegard von Bingen, and its use in homeopathy, crystal healing, anthroposophic medicine, and spagyrics.

Studies on Zinc in Wound Healing

This publication aims to inspire budding entrepreneurs in Africa to consider business

opportunities in agriculture and agro-industry, broadly defined. It is intended to be a promotional tool, as a sort of call to arms, particularly for women and youth. It also aims to serve as an educational tool and knowledge product in business schools and entrepreneurship incubator programmes for case study-based learning on operating an agribusiness or agro-industry enterprise in Africa. The publication offers guidance to agripreneurs on how to overcome or avoid potential pitfalls and learn from the paths set out by the 12 agripreneurs, whose stories reflect real-life experiences of agribusiness development in Africa. It should be seen as a collection of resources on agripreneurship, focused on these four topical areas: scale, women, youth, and challenging environments, while providing guiding advice for agripreneurs and policy-makers. In addition to educating entrepreneurs, it is important to highlight the fundamental role of policy-makers in shaping the enabling environment for agripreneurship. In this context, the publication aims to provide concrete policy recommendations on how to improve the enabling environment for agripreneurship, based on the advice of the 12 agripreneurs featured here. The aim is to guide policy-makers to improve these targeted areas, and inspire them to do so by providing accounts of successful agripreneurs who have built businesses with positive economic, social and environmental impacts on national development.

Polymer Thermodynamics: Blends, Copolymers and Reversible Polymerization describes the thermodynamic basis for miscibility as well as the mathematical models used to predict the compositional window of miscibility and construct temperature versus volume-fraction phase diagrams. The book covers the binary interaction model, the solubility parameter approach, and the entropic difference model. Using equation of state (EOS) theories, thermodynamic models, and information from physical properties, it illustrates the construction of phase envelopes. The book presents nine EOS theories, including some that take into account molecular weight effects. Characteristic values are given in tables. It uses the binary interaction model to predict the compositional window of miscibility for copolymer/homopolymer blends and blends of copolymers and terpolymers with common monomers. It discusses Hansen fractional solubility parameter values, six phase diagram types, the role of polymer architecture in phase behavior, and the mathematical framework for multiple glass transition temperatures found in partially miscible polymer blends. The author also illustrates biomedical and commercial applications of nanocomposites, the properties of various polymer alloys, Fick's laws of

diffusion and their implications during transient events, and the use of the dynamic programming method in the sequence alignment of DNA and proteins. The final chapter reviews the thermodynamics of reversible polymerization and copolymerization. Polymer blends offer improved performance/cost ratios and the flexibility to tailor products to suit customers' needs. Exploring physical phenomena, such as phase separation, this book provides readers with methods to design polymer blends and predict the phase behavior of binary polymer blends using desktop computers.

As the environmental impact of existing construction and building materials comes under increasing scrutiny, the search for more eco-efficient solutions has intensified. Nanotechnology offers great potential in this area and is already being widely used to great success. Nanotechnology in eco-efficient construction is an authoritative guide to the role of nanotechnology in the development of eco-efficient construction materials and sustainable construction. Following an introduction to the use of nanotechnology in eco-efficient construction materials, part one considers such infrastructural applications as nanoengineered cement-based materials, nanoparticles for high-performance and self-sensing concrete, and the use of nanotechnology to improve the bulk and surface properties of steel for structural applications. Nanoclay-modified asphalt

mixtures and safety issues relating to nanomaterials for construction applications are also reviewed before part two goes on to discuss applications for building energy efficiency. Topics explored include thin films and nanostructured coatings, switchable glazing technology and third generation photovoltaic (PV) cells, high-performance thermal insulation materials, and silica nanogel for energy-efficient windows. Finally, photocatalytic applications are the focus of part three, which investigates nanoparticles for pollution control, self-cleaning and photosterilisation, and the role of nanotechnology in manufacturing paints and purifying water for eco-efficient buildings. Nanotechnology in eco-efficient construction is a technical guide for all those involved in the design, production and application of eco-efficient construction materials, including civil engineers, materials scientists, researchers and architects within any field of nanotechnology, eco-efficient materials or the construction industry. Provides an authoritative guide to the role of nanotechnology in the development of eco-efficient construction materials and sustainable construction Examines the use of nanotechnology in eco-efficient construction materials Considers a range of important infrastructural applications, before discussing applications for building energy efficiency

Troy and Homer

The ancient Greek poet Homer tells of the wealthy city of Troy and its defeat in the Trojan War. Since the classical period there has been much debate about

whether this is a poetic fiction or a memory of historical reality. Earlier excavations at the hill of Hisarlik, in Turkey, brought no answer, but in 1988 new excavations, under the direction of Manfred Korfmann, led to a radical shift in understanding. In this book Joachim Latacz, one of Korfmann's closest collaborators, shows how this new research has shed light on what is now known about Troy and the Trojan War.

For years, Elisabeth Hasselbeck couldn't figure out what was making her sick. She asked doctors and consulted nutritionists, but no one seemed to have any answers. It wasn't until spending time in the Australian Outback, living off the land on the grueling Survivor TV show, that, ironically, her symptoms vanished. Returning home, she pinpointed the food that made her sick -- gluten, the binding element in wheat. By simply eliminating it from her diet, she was able to enjoy a completely normal, healthy life. But that wasn't all. Hasselbeck discovered the myriad benefits that anyone can enjoy from a gluten-free diet: from weight loss and increased energy to even the alleviation of the conditions of autism. In this all-inclusive book, Hasselbeck shares her hard-earned wisdom on living life without gluten and loving it. She gives you everything you need to know to start living a gluten-free life, from defining gluten - where to find it, how to read food labels - to targeting gluten-free products, creating G-Free shopping lists, sharing recipes, and managing G-Free living with family and friends. How to Survive in a World Without Antibiotics

Restores the Platonic history and context of mysticism and shows how it helps us understand more deeply the humanities as a whole, from philosophy and literature to art. In *Platonic Mysticism*, Arthur Versluis clearly and tautly argues that mysticism must be properly understood as belonging to the great tradition of Platonism. He demonstrates how mysticism was historically understood in Western

philosophical and religious traditions and emphatically rejects externalist approaches to esoteric religion. Instead he develops a new theoretical-critical model for understanding mystical literature and the humanities as a whole, from philosophy and literature to art. A sequel to his *Restoring Paradise*, this is an audacious book that places Platonic mysticism in the context of contemporary cognitive and other approaches to the study of religion, and presents an emerging model for the new field of contemplative science. “An important work on the mystical experience delving deep into its history, particularly from the Platonic perspective. An essential text for anyone interested in mysticism and its relationship to philosophy and creative expression.” — Andrew Newberg, author of *How Enlightenment Changes Your Brain: The New Science of Transformation* “The present work, the latest from the pen of Arthur Versluis, provides a trenchant, learned, and illuminating analysis of the origins of Western mysticism in the Platonist tradition, relayed through such figures as Plotinus and Dionysius the Areopagite, down through Meister Eckhart and others, while suitably excoriating the attempts of certain modern philosophers and sociologists of religion to ‘deconstruct’ it from a materialist perspective. I found it a rattling good read!” — John Dillon, author of *The Heirs of Plato: A Study of the Old Academy (347–274 BC)*

The 8-Hour Sleep Paradox

In a traditional sense, the Indian institution of the
"pandit" denoted an individual that was a scholar,
teacher, adviser, spiritual adviser, specialist, and legal
expert says Michaels (classical Indology, U. of
Heidelberg, Germany). He presents 13 essays that are
at once an examination of the role of the pandit in
current Sanskrit scholarship and a festschrift to one
particular pandit, K. Parameswara Aithal. The essays
explore the nature of being a pandit, examine
conflicts between western methods of scholarship and
the pandit's approach to the acquisition and
preservation of knowledge, and provide profile of past
and present pandits. Distributed by South Asia Books.

Toxemia Explained

In a society overrun by commercial clutter, religion has become yet another product sold in the consumer marketplace, and faiths of all kinds must compete with a myriad of more entertaining and more convenient leisure activities. Brands of Faith argues that in order to compete effectively faiths have had to become brands – easily recognizable symbols and spokespeople with whom religious prospects can make immediate connections. Mara Einstein shows how religious branding has expanded over the past twenty years to create a blended world of commerce and faith where the sacred becomes secular and the secular sacred. In a series of fascinating case studies of faith brands, she explores the significance of branded church courses, such as Alpha and The Purpose Driven Life, mega-churches, and the popularity of the televangelist Joel Olsteen and television presenter Oprah Winfrey, as well as the rise of Kaballah. She asks what the consequences of this religious marketing will be, and outlines the possible results of religious commercialism – good and bad. Repackaging religion – updating music, creating teen-

targeted bibles – is justifiable and necessary. However, when the content becomes obscured, religion may lose its unique selling proposition – the very ability to raise us above the market.
