Healthcare Interpreting in Small Bites

In the era of Information Technology, the computer is the machine-tool. Designers and planners are information workers and many have turned to CAD technology, hoping to find something that will ensure survival in the increasingly competitive business climate. The new problem relates not to any limitations of systems, but to the lack of knowledge on how to implement, manage and control the CAD technology. This book is aimed at design professionals, planners and managers. Although references and examples relate to building and construction work, most of the principles are unlikely to differ whatever the application. As a result, it should be useful in the fields of mechanical engineering and manufacturing industry too. Chapter 13 deals with applications in construction planning, space planning and facilities management. Emphasis throughout is on people, responsibilities, applications, organisation and procedures. The design process is highly interactive. Manual drawing, or use of a computer drafting system to mimic this, inevitably leads to inconsistencies within the design information. Computer modelling of projects presents better opportunities and the many techniques range

from 2-D modelling to solid modelling. A blend of 2-D and 3-D methods to suit the application is essential today. System planning itself requires a carefully managed feasibility study comprising preliminary and detailed phases. Objectives and requirements of the office must be set down. Then there is something to compare the available systems with. The chosen system must be capable of evolving to meet an ever-changing future.

Analysis of the legal register of a corpus of some fifty Ramesside royal decrees dating from 1300 to 1100 B.C. in the wider context of forensic discourse analysis of the legislative genre, in an attempt to establish constants in forensic linguistics that span time and space. The general character and formulation of these normative documents reveal a remarkable homogeneity and represent a specific linguistic register that has a common textemic, pragmatic, and narratologic structure, as well as a coherent syntactic and lexico-semantic usage, as modern legal dialects do today. Furthermore, the research tries to enrich the understanding of Egyptian legal terminology and legal categories by a systematic semantic analysis of the classifiers used in the legal lexicon (classifiers in the hieroglyphic system represent iconic elements that have no phonetic value, but assign words to semantic classes). The extremely interesting Egyptian graphic categorization set of classifiers present in these texts offers some invaluable insights into the Egyptian conceptual organization system.

major impact on a business. Investment in time, effort and resources on rebids can underpin significant increases in growth, at a lower cost than from new business alone. Winning Your Rebid will help incumbent contractors to increase their chances of retaining an existing contract which, whilst it includes the skills of bidding for new contracts, requires a significantly different set of actions and processes in order to be consistently successful. The book takes the reader through all the preparations over the period of a contract that will put them in the best position to win their rebid, and gives advice, techniques and ideas for how to run and deliver it successfully.
