Representing Rape is the first feminist analysis of the language of sexual assault trials from the perspective of linguists. Susan Ehrlich argues that language is central to all legal settings - specifically sexual harassment and acquaintance rape hearings where linguistic descriptions of the events are often the only type of evidence available. Language does not simply reflect but helps to construct the character of the people and events under investigation. The book is based around a case study of the trial of a male student accused of two instances of sexual assault in two different settings: a university tribunal and a criminal trial. This case is situated within international studies on rape trials and is relevant to the legal systems of the US, Canada, Britain, Australia, and New Zealand. She shows how culturally-dominant notions about rape percolate through the talk of sexual assault cases in a variety of settings and ultimately shape their outcome. Ehrlich hopes that to understand rape trials in this way is to recognize their capacity for change. By highlighting the underlying preconceptions and prejudices in the language of

courtrooms today, this important book paves the way towards a fairer judicial system for the future.

jaws are getting smaller and our teeth crooked and crowded, creating not only aesthetic challenges but also difficulties with breathing. Modern orthodontics has persuaded us that braces and oral devices can correct these problems. While teeth can certainly be straightened, what about the underlying causes of this rapid shift in oral evolution and the health risks posed by obstructed airways? Sandra Kahn and Paul R. Ehrlich, a pioneering orthodontist and a world-renowned evolutionist, respectively, present the biological, dietary, and cultural changes that have driven us toward this major health challenge. They propose simple adjustments that can alleviate this developing crisis, as well as a major alternative to orthodontics that promises more significant long-term relief. Jaws will change your life. Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in

developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

ISE Medical Terminology: Learning Through Practice

Life has never been more stressful. It is no coincidence that chronic degenerative disorders such as cancer, heart disease, autoimmune illnesses, and mental-health conditions are on the rise. But if we want to tackle them, we need to look beyond their symptoms. That is the message of dentist and health advocate Dr Ron Ehrlich. He explores why public-health campaigns are so confusing and often contradictory, and what role the food and pharmaceutical industries play in our healthcare system. It's a story that's easy to miss but difficult to ignore. He then

untangles how problems in one part of the body are intimately connected to the whole, and how we as individuals are inextricably linked to our own environment. Ehrlich redefines the stresses that affect us in our modern world, and shows how to strengthen the five pillars -- sleep, breathing, nutrition, movement, and thought -- that support our health. A Life Less Stressed will help you develop a broader understanding of the challenges we face today and empower you to take control, build resilience, and be the best you can be.
