Electrical and magnetic forces are so much a part of our everyday lives, that we don't often think about how they work or how they are related. Before digital music players and eBook readers were commonplace, though, scientists put a lot of effort into discovering just what these forces were and how to harness their energy in ways that would make life easier. Through their experimentation, they discovered the connection between electrical and magnetic forces. They found ways to bring electricity to people who wanted it. Today, we benefit from these discoveries, but there are always new things to discover! Whether you try the experiments and activities in this book for fun or for a science fair project, you'll get an up-close look at the forces of electricity and magnetism. Enjoy each of the shocking activities in this book as you discover the pull of science!

Primarily a scientific biography of Walther H. Nernst (1864–1941), one of Germany's most important, productive and often controversial scientists, this 1999 book addresses a set of specific scientific problems that evolved at the intersection of physics, chemistry and technology during one of the most revolutionary periods of modern physical science. Nernst, who won the 1920 Nobel Prize for Chemistry, was a key figure in the transition to a modern physical science, contributing to the study of solutions, of

chemical equilibria, and of the behavior of matter at the extremes of the temperature range. A director of major research institutes, rector of the Berlin University, and inventor of a new electric lamp, Nernst was the first 'modern' physical chemist, an able scientific organizer, and a savvy entrepreneur. His career exemplified the increasing connection between German technical industry and academic science, between theory and experiment, and between concepts and practice.
