The State of State English Standards, 2005

State education departments and school districts face an important challenge in implementing a new law that requires disadvantaged students to be held to the same standards as other students. The new requirements come from provisions of the 1994 reauthorization of Title I, the largest federal effort in precollegiate education, which provides aid to "level the field" for disadvantaged students. *Testing, Teaching, and Learning* is written to help states and school districts comply with the new law, offering guidance for designing and implementing assessment and accountability systems. This book examines standards-based education reform and reviews the research on student assessment, focusing on the needs of disadvantaged students covered by Title I. With examples of states and districts that have track records in new systems, the committee develops a practical "decision framework" for education officials. The book explores how best to design assessment and accountability systems that support high levels of student learning and to work toward continuous improvement. *Testing, Teaching, and Learning* will be an important tool for all involved in educating disadvantaged students—state and local administrators and classroom teachers.

Science Test Practice, Grade 8

Educators and policy makers in the United States have relied on tests to measure educational progress for more than 150 years, and have used the results for many purposes. They have tried minimum competency testing; portfolios; multiple-choice items,

brief and extended constructed-response items; and more. They have contended with concerns about student privacy, test content, and equity--and they have responded to calls for tests to answer many kinds of questions about public education and literacy, international comparisons, accountability, and even property values. State assessment data have been cited as evidence for claims about many achievements of public education, and the tests have also been blamed for significant failings. States are now considering whether to adopt the "common core" academic standards, and are also competing for federal dollars from the Department of Education's Race to the Top initiative. Both of these activities are intended to help make educational standards clearer and more concise and to set higher standards for students. As standards come under new scrutiny, so, too, do the assessments that measure their results. This book summarizes two workshops convened to collect information and perspectives on assessment in order to help state officials and others as they review current assessment practices and consider improvements.

Success with Math Tests

As a teacher, what you want most is for your students to learn—to immerse themselves in rich and challenging content and leave your classroom better prepared for school and life. In English language arts and humanities, this includes developing the multifaceted reading, writing, thinking, and communication skills that constitute next generation literacy, including the ability to

- * Read complex text independently
- * Develop strong content knowledge through reading, writing, listening, and speaking
- * Tailor communication in response to different audiences, tasks, purposes, and disciplines
- * Comprehend text as well as critique it
- * Value evidence in arguments they read, hear, or develop
- * Use technology strategically and capably
- * Understand perspectives and cultures that differ from their own

But as a teacher, you also know how much is riding on THOSE TESTS—achievement tests from the national assessment consortia, the SAT and ACT, and independent state assessments. Is it possible to help students succeed on mandated tests without sacrificing your values, your creativity, and their education? Yes, it is possible. This book shows you how. This not a test-prep book. It is not about “drill

and kill” practices that narrow learning so that students will pass an exam. Instead, authors Maureen Connolly and Vicky Giouroukakis present a lesson planning approach for the secondary classroom that generates test success as a byproduct of comprehensive literacy learning. After a comparative analysis of how current ELA assessments measure literacy, they model a backward design-based process for using these test items as a tool to create engaging and effective instruction. With 6 sample lessons, 42 instructional techniques, and tips for differentiation, this practical resource will empower you to help the students you love become capable, literate individuals who are also well-prepared to ace high-stakes tests.

Test-based accountability systems that attach high stakes to standardized test results have raised a number of issues on educational assessment and accountability. Do these high-stakes tests measure student achievement accurately? How can policymakers and educators attach the right consequences to the results of these tests? And what kinds of tradeoffs do these testing policies introduce? This book responds to the growing emphasis on high-stakes testing and offers recommendations for more-effective test-based accountability systems.

Achieving Next Generation Literacy

Florida Biology 1 End-of-Course Assessment Book + Online

The importance of state academic standards soared in January 2002 with passage of the No Child Left Behind Act (NCLB). Not only does that milestone law require all states to have demanding academic standards in place and to demonstrate steady student progress toward academic proficiency as set forth in those standards, it also links states' accountability for increasing students' achievement to the quality of their teachers. The Higher Education Act also asks states to report annually on pass rates on licensure tests taken by prospective teachers and on how their K-12 standards relate to their teacher-preparation program standards. For the first time in U.S. history, these key elements of our public-education system are joined--and they are all joined to state academic standards that set forth what K-12 students are expected to learn in core subjects. The quality of those standards thus matters more than ever before. In this review, that quality is appraised in 2005 in reading and English language arts, arguably the most basic and consequential subject of all. Do states' current standards expect what they should? Are they demanding enough? Clear enough? Faithful to what is known about how students learn? And are states using them to guide not only the curriculum and assessment system for students but also their teacher-training programs, the tests that they require of prospective teachers, and their professional development activities for current teachers? This report answers those and many more questions about

reading and English standards in 49 states and the District of Columbia. (Iowa has no state standards.) In addition to official standards documents, a wide variety of supplemental materials were reviewed against 34 criteria organized into six major categories. Criteria were scored on a 4-point scale and grade point averages were converted to letter grades. Appended are: (1) The 2005 Review Form and Methodology; (2) Criteria, Rationales, and State Results; (3) Unteachable Literature Standards; (4) Strong Literature Standards; and (5) Tables. [Report also produced by the Thomas B. Fordham Institute. Foreword by Chester E. Finn, Jr.].
