This book focuses on planning and scheduling applications. Planning and scheduling are forms of decision-making that play an important role in most manufacturing and services industries. The planning and scheduling functions in a company typically use analytical techniques and heuristic methods to allocate its limited resources to the activities that have to be done. The application areas considered in this book are divided into manufacturing applications and services applications. The book covers five areas in manufacturing: project scheduling, job shop scheduling, scheduling of flexible assembly systems, economic lot scheduling, and planning and scheduling in supply chains. It covers four areas in services: reservations and timetabling, tournament scheduling, planning and scheduling in transportation, and workforce scheduling. At the end of each chapter, a case study or a system implementation is described in detail. Numerous examples and exercises throughout the book illustrate the material presented. The fundamentals concerning the methodologies used in the application chapters are covered in the appendices. The book comes with a CD-ROM that contains various sets of powerpoint slides. The CD

also contains several planning and scheduling systems that have been developed in academia as well as generic optimization software that has been developed in industry. This book is suitable for more advanced students in industrial engineering and operations research as well as graduate students in business. Michael Pinedo is the Julius Schlesinger Professor of Operations Management in the Stern School of Business at New York University. His research interests lie in the theoretical and applied aspects of planning and scheduling. He has written numerous papers on the theory of deterministic and stochastic scheduling and has also consulted extensively in industry. He has been actively involved in the development of several large industrial planning and scheduling systems.

In 1983, Boston and Chicago elected progressive mayors with deep roots among community activists. Taking office as the Reagan administration was withdrawing federal aid from local governments, Boston's Raymond Flynn and Chicago's Harold Washington implemented major policies that would outlast them. More than reforming governments, they changed the substance of what the government was trying to do: above all, to effect a measure of redistribution of resources to the cities' poor and working classes and away from hollow goals of "growth" as measured by the accumulation of skyscrapers. In Boston, Flynn moderated an office development boom while securing millions of dollars for affordable housing. In Chicago, Washington implemented concrete measures to save manufacturing jobs, against the tide of national policy and trends. Activists in City Hall examines how both mayors achieved their objectives by incorporating neighborhood activists as a new organizational force in devising, debating, implementing, and shaping policy. Based in extensive archival research enriched by details and insights gleaned from hours of interviews with key figures in each administration and each city's activist community, Pierre Clavel argues that key to the success of each mayor were numerous factors: productive contacts between city hall and

neighborhood activists, strong social bases for their agendas, administrative innovations, and alternative visions of the city. Comparing the experiences of Boston and Chicago with those of other contemporary progressive cities—Hartford, Berkeley, Madison, Santa Cruz, Santa Monica, Burlington, and San Francisco—Activists in City Hall provides a new account of progressive urban politics during the Reagan era and offers many valuable lessons for policymakers, city planners, and progressive political activists.

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative

that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, Vox "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise

cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
