Dispute boards were first introduced almost 20 years ago. Since then close to \$100 billion US dollars worldwide has been spent on construction projects that have used dispute boards. Of these, 98% were constructed without any court battles and of the remaining 2%, the dispute board decisions were upheld by either arbitration and/or the court: a truly impressive record. Yet very little is known about what dispute boards are and how they operate. This book provides the knowledge necessary for those actively involved in dispute board work as well as for those who need to learn the process. Important features of the book include: analysis of the differences between dispute adjudication boards, dispute resolution boards and combined dispute boards in-depth discussion of both the existing and

Nonprofit leadership is messy Nonprofits leaders are optimistic by nature. They believe with time, energy, smarts, strategy and sheer will, they can change the world. But as staff or board leader, you know nonprofits present unique challenges. Too many cooks, not enough money, an abundance of passion. It's enough to make you feel overwhelmed and alone. The people you help need you to be successful. But there are so many obstacles: a micromanaging board that doesn't understand its true role; insufficient fundraising and donors who make unreasonable demands; unclear and inconsistent messaging and marketing; a leader who's a star in her sector but a difficult boss And yet, many nonprofits do thrive. Joan Garry's Guide to Nonprofit Leadership will show you how to do just that. Funny, honest, intensely actionable, and based on her decades of experience, this is the book Joan Garry wishes she had when she led GLAAD out of a financial crisis in 1997. Joan will teach you how to: Build a powerhouse board Create an impressive and sustainable fundraising program Become seen as a 'workplace of choice' Be a compelling public face of your nonprofit This book will renew your passion for your mission and organization, and help you make a bigger difference in the world.

The Companies Act, 2013 has enforced sweeping changes to the mind-set of corporate and their managers alike. Codified roles and responsibilities, higher penalties, disclosures have made the position of directors more demanding. As one moves along with complying with the letter and spirit of law, there may be many questions which are not answered by the relevant section itself. A plethora of rules, notifications, case laws and standards of the ICAI and ICs also need to be looked into. With this background, the book takes a comprehensive approach to understand the requirements of the Office of a director, his roles, responsibilities, liabilities in the light of the relevant sections, decided cases and the applicable Secretarial standards, when it comes to procedural aspects like Board and Committee meetings. For ready reference updated rules for appointment and management of directors, key managerial personnel, meeting of Board and its powers, the Companies (Amendment) Bill, 2016, Exemption notification for government and private companies, SEBI (LODs) and SS-1 have been provided as appendices. To further help our readers navigate their way in the daily performance of corporate actions a separate Chapter on resolutions has also been carved out. About the author

Game theory could be formally defined as a theory of rational decision in conflict situations. Models of such situations, as they are conceived in game theory, involve (1) a set of decision makers, called players; (2) a set of strategies available to each player; (3) a set of outcomes, each of which is a result of particular choices of strategies made by the players on a given play of the game; and (4) a set of payoffs accorded to each player in each of the possible outcomes. It is assumed that each player is 'individually rational', in the sense that his preference ordering of the outcomes is determined by the order of magnitudes of his (and only his) associated payoffs. Further, a player is rational in the sense that he assumes that every other player is rational in the above sense. The rational player utilizes knowledge of the other players' payoffs in guiding his choice of strategy, because it gives him information about how the other players' choices are guided. Since, in general, the orders of magnitude of the payoffs that accrue to the several players

in the several outcomes do not coincide, a game of strategy is a model of a situation involving conflicts of interests.

the spirit of *The View from Saturday* or *Frindle*. June Harper is a good kid. She follows the rules, plays flute in band, and spends her spare time reading. Nobody would ever call her a rebel . . . until her parents take strict parenting to a whole new level. It starts with one book deemed "inappropriate" by June's parents. What follows is a massive book ban at Dogwood Middle School, and suddenly everything June loves--the librarian, books, an author visit--is gone. All seems hopeless. Then June discovers a Little Free Library on her walk to school. When her classmates realize she has access to contraband, she (secretly) becomes the most popular girl in school. A risky reading movement begins at Dogwood, which could destroy June--or gain enough power to protect the one thing she cares most about: the freedom to read! Equal parts fun and empowering, this novel explores censorship, freedom of speech, and activism. For any kid who doesn't believe one person can effect change . . . and for all the kids who already know they can! "[A] funny and fast read." --School Library Journal

Recently, growing interest in the use of remote sensing imagery has appeared to provide synoptic maps of water quality parameters in coastal and inner water ecosystems;, monitoring of complex land ecosystems for biodiversity conservation; precision agriculture for the management of soils, crops, and pests; urban planning; disaster monitoring, etc. However, for these maps to achieve their full potential, it is important to engage in periodic monitoring and analysis of multi-temporal changes. In this context, very high resolution (VHR) satellite-based optical, infrared, and radar imaging instruments provide reliable information to implement spatially-based conservation actions. Moreover, they enable observations of parameters of our environment at greater broader spatial and finer temporal scales than those allowed through field observation alone. In this sense,

recent very high resolution satellite technologies and image processing algorithms present the opportunity to develop quantitative techniques that have the potential to improve upon traditional techniques in terms of cost, mapping fidelity, and objectivity. Typical applications include multi-temporal classification, recognition and tracking of specific patterns, multisensor data fusion, analysis of land/marine ecosystem processes and environment monitoring, etc. This book aims to collect new developments, methodologies, and applications of very high resolution satellite data for remote sensing. The works selected provide to the research community the most recent advances on all aspects of VHR satellite remote sensing.
