In this book, Barney Kasdan, leader of one of the world's largest Messianic Jewish congregations, explains every holy day described in Scripture. He teaches about the major and minor holy days, ever mindful that he is writing to both Jews and Christians. Beginning with the Sabbath, the first holy day revealed in Scripture, he writes about Passover, Firstfruits, Pentecost, Trumpets, the Day of Atonement, the Feast of Tabernacles, Hanukkah, and Purim (the special day given in the time of Queen Esther). Each chapter offers historical background, traditional Jewish observance, relevance to the New Testament, prophetic significance, and a practical guide for believers, including recipes, songs, and crafts. There are other books on the same subject but this one goes beyond them all. It is written by a Messianic Jew, a Jew who trusts Yeshua (Jesus). Who better to explain God's Appointed Times? 145 pages.

This combination of text and lab book presents an entirely different approach to structural geology. Designed for undergraduate laboratory classes, it provides a step-by-step guide for solving geometric problems arising from structural field observations. The book discusses both traditional methods and cutting-edge approaches, with emphasis given to graphical methods and visualization techniques that support students in tackling challenging two- and three-dimensional problems. Numerous exercises encourage practice in using the techniques, and demonstrate how field observations can be converted into useful information about geological structures and the processes responsible for creating them. This updated fourth edition incorporates new material on stress, deformation, strain and flow, and the underlying mathematics of the subject. With stereonet plots and solutions to the exercises available online at [www.cambridge.org/ragan](http://www.cambridge.org/ragan), this book is a key resource for undergraduates, advanced students and researchers wanting to improve their practical skills in structural geology.

Political Consultants and Campaigns: One Day to Sell examines the differences between how political science theory

suggests campaigns should be run and how political consultants actually run campaigns. In the wake of consultants who effortlessly move from campaigners to policymakers, the dearth of knowledge about the attitudes, beliefs, and strategies of the consultants themselves is still a glaring absence in the analysis of American politics. How can we purport to know what is happening in American political campaigns if we don't know what is on the minds of the men and women who run them? This book provides a clearer understanding of modern-day political campaigns by revealing what is on the minds of the people who run them. With original data from consultants, campaign managers, and professional campaign schools, author Jason Johnson examines consultant behavior on message formation, policy positioning, candidate recruitment, Internet strategy, and negative advertising and compares these practices to existing political science theory. This groundbreaking research makes *Political Consultants and Campaigns: One Day to Sell* a must-have resource for all students of American politics, campaign managers, or anyone interested in how political campaigns in America are run.

The Journal, initially dictated to his stepson-in-law when they were both imprisoned in the mid-1670s, combines burning rage against social injustice and a visionary sense of God 'rising' through all creation with a forthright account of his own persecution and suffering. Written in a style which, in some respects, anticipates the work of James Joyce and the other great modernists, it is, as Nigel Smith writes in his stimulating Introduction, not only 'a classic of spiritual and autobiographical writing' but 'an important literary achievement in its own right'.

The Affordable Housing Reader brings together classic works and contemporary writing on the themes and debates that have animated the field of affordable housing policy as well as the challenges in achieving the goals of policy on the ground. The Reader – aimed at professors, students, and researchers – provides an overview of the literature on housing policy and planning that is both comprehensive and interdisciplinary. It is particularly suited for graduate and undergraduate courses on housing policy offered to students of public policy and city planning. The Reader is structured around the key debates in affordable housing, ranging from the conflicting motivations for housing policy, through analysis of the causes of and solutions to housing problems, to concerns about gentrification and housing and race. Each debate is contextualized in an introductory essay by the editors, and illustrated with a range of texts and articles. Elizabeth Mueller and Rosie Tighe have brought together for the first time into a single volume the best and most influential writings on housing and its importance for planners and policy-makers.

From earliest infancy, a typically developing child imitates or mirrors the facial expressions, postures and gestures, and emotional behavior of others. Where does this capacity come from, and what function does it serve? What happens when imitation is impaired? Synthesizing cutting-edge research emerging from a range of disciplines, this important book

examines the role of imitation in both autism and typical development. Topics include the neural and evolutionary bases of imitation, its pivotal connections to language development and relationships, and how early imitative deficits in autism might help explain the more overt social and communication problems of older children and adults.
