Custom and Confrontation

Each year, three or four Mn/DOT snowplows suffer bridge/box collisions while plowing. These collisions can shear off the box and frame damage to the truck. The box then falls onto the road surface where it becomes an immediate life-threatening hazard to traffic. In some cases, the integrity of the bridge may also be compromised. A typical collision of this type requires expenditures of 30,000 to 40,000 dollars and results in potentially dangerous delays in achieving clean pavement status along the affected snowplowing route. Feasibility of linking on-board GPS technology for Automatic Vehicle Location with the current bridge information database at Mn/DOT, "BrInfo," will be investigated, on a plow-route by route basis, to create collision maps. Collision avoidance then will use some primitive form of map matching. In addition, a prototype warning system that serves as a bridge proximity sensor will be developed to alert the snow plow driver that he/she is approaching a bridge with the box at a dangerous height. This warning system is integrated in an on-board box position sensor so that the driver can be alerted that the box must immediately be lowered. While realizing that additional means for box height control may complicate snowplow maintenance,

any system that relieves the driver of cognitive overload, to reduce driver stress and fatigue during plowing operating, when running extended rural plow routes, needs to be implemented.

Field & Stream: The Total Redneck Manual

A breakthrough program for triathletes -- beginner, intermediate, and advanced -- showing how to balance training intensity to maximize performance -- from a fitness expert and elite coach. Cutting-edge research has proven that triathletes and other endurance athletes experience their greatest performance when they do 80 percent of their training at low intensity and the remaining 20 percent at moderate to high intensity. But the vast majority of recreational triathletes are caught in the so-called "moderate-intensity rut," spending almost half of their time training too hard--harder than the pros. Training harder isn't smarter; it actually results in low-grade chronic fatigue that prevents recreational athletes from getting the best results. In 80/20 Triathlon, Matt Fitzgerald and David Warden lay out the real-world and scientific evidence, offering concrete tips and strategies,

along with complete training plans for every distance--Sprint, Olympic, Half-Ironman, and Ironman--to help athletes implement the 80/20 rule of intensity balance. Benefits include reduced fatigue and injury risk, improved fitness, increased motivation, and better race results.

"Anthropologists and students of anthropology may read this book because it is a superior ethnography, detailed and enriched by theoretical insights. But at the heart of this book is a moral take, a simple but powerful story about an indigenous people who were wronged, who resisted for more than 100 years, and who may yet prevail. This message, ultimately, lends the book its true meaning and value."—William Rodman, *Anthropologica* "A major contribution to the ethnography and history of Malaita and Melanesia, and to the growing literature on cultural resistance. But above all, his humane and painful analysis of the meeting of

peoples living in different worlds and constructing their agendas and moralities on incommensurate—and apparently equally arbitrary—principles, represents a major contribution and challenge to anthropological thought, addressing the basic issue of what it is to be human."—Fredrik Barth

Aeronautical Information Manual Study Guide For The Private Pilot

AERO TRADER & CHOPPER SHOPPER, MAY 2006

The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to

airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.

"Golf is a beloved yet technical game, so a sound swing and precise technique are essential. Most golfers who want to improve their skills go to the range and work painstakingly on their swings, not realizing it's often their performance state on the course that needs work, not their technique. Simple things such as awareness of your balance, tension, and tempo, as well as the ability to control mental, emotional, and social variables you encounter while playing can quickly take your game to a new performance level.
