The crash of the Indian plate into Asia is the biggest known collision in geological history, and it continues today. The result is the Himalaya and Karakoram - one of the largest mountain ranges on Earth. The Karakoram has half of the world's highest mountains and a reputation as being one of the most remote and savage

ranges of all. In this beautifully illustrated book, Mike Searle, a geologist at the University of Oxford and one of the most experienced field geologists of our time, presents a rich account of the geological forces that were involved in creating these mountain ranges. Using his personal accounts of extreme mountaineering and research in the region, he pieces together the geological processes that formed such impressive peaks.

Many people of all ages today continue to be attracted to sociology and other social sciences because of their promise to contribute to better political, social, and moral understandings of themselves and their social worlds-and often because they hope it will help them to build a better society. In a world of new movements and deepening economic inequality following the Great Recession, this new edition

is vital. It features dozens of new examples from the latest research, with an emphasis on the next generation of liberation sociologists. The authors expand on the previous edition with the inclusion of sections on decolonisation paradigms in criminology, critical speciesism, and studies of environmental racism and environmental privilege. There is an expanded focus on participatory action research, and increased coverage of international liberation social scientists. Work by psychologists, anthropologists, theologians, historians, and others who have developed a liberation orientation for their disciplines is also updated and expanded.

production in order to meet the ongoing need for new and affordable sources of food, chemicals and energy for future generations. The chapters explore new microalgae cultivation techniques, including solid (biofilm) systems, and heterotrophic production methods, while also critically investigating topics such as combining wastewater as a source of nutrients, the effect of CO₂ on growth, and converting biomass to methane through anaerobic digestion. The book highlights innovative bioproduct optimization and molecular genetic techniques, applications of genomics and metabolomics, and the genetic engineering of microalgae strains targeting biocrude production. The latest developments in microalgae harvesting and dewatering technologies, which combine biomass production with electricity generation, are presented, along with detailed techno-economic modeling. This extensive volume was written by respected experts in their fields and is intended for a wide audience of researchers and engineers.
