Few American economists have exerted an international influence equal to that of Yale professor Irving Fisher (1867-1947) who excelled as a statistician, econometrician, mathematician, and pure theorist. Of his 18 published volumes on economics, those in monetary economics constitute his most enduring contribution; indeed much of Fisher's work on capital, interest, income, money, prices and business cycles has been incorporated into modern analyses. Of all his works, "The Theory of Interest" is especially significant; not only does it contain his celebrated theory in which the rate of interest is shown to be dependent upon all other elements involving productivity, time preference, risk and uncertainty, but also a strikingly original explanation of the broader capitalistic process.

topics along with coverage of analytic geometry in three dimensions and an introduction to concepts covered in calculus. With the Fourth Edition, Larson continues to revolutionize the way students learn material by incorporating more real-world applications, ongoing review, and innovative technology. How Do You See It? exercises give students practice applying the concepts, and new Summarize features, and Checkpoint problems reinforce understanding of the skill sets to help students better prepare for tests. The companion website LarsonPrecalculus.com offers free access to multiple tools and resources to supplement students' learning. Stepped-out solution videos with instruction are available at CalcView.com for selected exercises throughout the text. Fundamentals of Biomechanics introduces the exciting world of how human movement is created and how it can be improved. Teachers, coaches and physical therapists all use biomechanics to help people improve movement and decrease the risk of injury. The book presents a comprehensive review of the major concepts of biomechanics and summarizes them in nine principles of biomechanics.

Fundamentals of Biomechanics concludes by showing how these principles can be used by movement professionals to improve human movement. Specific case studies are presented in physical education, coaching, strength and conditioning,

and sports medicine.
