Algebra 1 Made Easy

No matter how mathematics achievement and persistence are measured, African Americans seem to lag behind their peers. This state of affairs is typically explained in terms of student ability, family background, differential treatment by teachers, and biased curricula. But what can explain disproportionately poor performance and persistence of African-American students who clearly possess the ability to do well, who come from varied family and socioeconomic backgrounds, who are taught by caring and concerned teachers, and who learn mathematics in the context of a reform-oriented mathematics curriculum? And, why do some African-American students succeed in mathematics when underachievement is the norm among their fellow students? Danny Martin addresses these questions in *Mathematics Success and Failure Among African-American Youth*, the results of a year-long ethnographic and observational study of African-American students and their parents and teachers. *Mathematics Success and Failure Among African-*

American Youth goes beyond the conventional explanations of ability, socioeconomic status, differential treatment, and biased curricula to consider the effects of history, community, and peers--and the individual agency that allows some students to succeed despite these influences. Martin's analysis suggests that prior studies of mathematics achievement and persistence among African Americans have failed to link sociohistorical, community, school, and intrapersonal forces in sufficiently meaningful ways, and that they suffer from theoretical and methodological limitations that hinder the ability of mathematics educators to reverse the negative achievement and persistence trends that continue to afflict African-American students. The analyses and findings offered in Martin's book lead to exciting implications for future research and intervention efforts concerning African-American students--and other students for whom history and context play an important role. This book will be useful and informative to many groups: mathematics education researchers, education researchers interested in the social context of learning and teaching, policymakers, preservice and in-service teachers, students, parents, and community advocates. It will also be of interest to readers concerned with multicultural education, cross-cultural studies of mathematics learning, sociology of education, Black Studies, and issues of underrepresentation in science and mathematics.

This updated book prepares students for the new Algebra I (Common Core) exam. Let's Review Algebra I is an ideal companion to high school textbooks and covers all Algebra I topics prescribed by the New York State Board of Regents. Features include: In-depth Regents exam preparation, including two recent Algebra I Regents exams and answer keys Easy to read topic summaries Step-by-step demonstrations and examples Review of all Algebra I topics Hundreds of sample questions with fully explained answers for practice and review, and more. Teachers can also use this book to plan lessons and as a helpful resource for practice, homework, and test questions.

Let's Review

The only way the education system can transform is to work together. Teachers and Administrators must work in a partnership to make lasting changes to a system that has historically been slow to evolve. The Teacher (Gary Armida) and the Admin (Dr. Kris Felicello) give the blueprint to this partnership to make schools better for kids.

Geometry Common Core Regents Course Workbook

Reflecting the latest New York State curriculum change, this brand-new addition to Barron's Let's Review series covers all topics prescribed by the New York State Board of Regents for the new Integrated Algebra Regents exam, which replaces the Math A Regents exam. This book stresses rapid learning, using many step-by-step demonstration examples, helpful diagrams, enlightening "Math Fact" summaries, and graphing calculator approaches. Fourteen chapters review the following topics: sets, operations, and algebraic language; linear equations and formulas; problem solving and technology; ratios, rates, and proportions; polynomials and factoring; rational expressions and equations; radicals and right triangles; area and volume; linear equations and graphing; functions, graphs, and models; systems of linear equations and inequalities; quadratic and exponential functions; statistics and visual representations of data; and counting and probability of compound events. Exercise sections within each chapter feature a large sampling of Regents-type multiple-choice and extended response questions, with answers at the back of the book. Students will find this book helpful when they need additional explanation and practice on a troublesome topic, or when they want to review specific topics before taking a classroom test or the Regents exam. Teachers will value it as a lesson-planning aid, and as a source of classroom exercises, homework problems, and test questions.

"Corporate reform" is not reform at all. Instead, it is the systematic destruction of the foundational American institution of public education. The primary motivation behind this destruction is greed. Public education in America is worth almost a trillion dollars a year. Whereas American public education is a democratic institution, its destruction is being choreographed by a few wealthy, wellpositioned individuals and organizations. This book investigates and exposes the handful of people and institutions that are often working together to become the driving force behind destroying the community public school.

Preparing for the Regents Examination Algebra 2 and Trigonometry

The new edition of Let's Review Math A and Barron's Regents Exams and Answers, Math A are combined in a two-book package. Purchase of this two-book Power Pack represents a retail savings of \$2.95 as compared to the price of books purchased separately. This major revision prepares students to succeed on the New York State Math A Regents Exam as it is now given. The book places increased emphasis on use of the graphing calculator, and in line with New York State Regents core curriculum, it shows how given problems can be solved in several different ways. The author also includes new Regents question types dealing, for instance, with motion problems and mathematical systems defined by tables. The totally rewritten chapter on problem-solving offers students a core set of strategies that apply to curriculum-related exercises. In addition to subject review, practice questions and exercises, the book also presents some complete recent Math A Regents exams with answers.
