Android app for note-taking by handwriting on the screen, in particular with a stylus. It has been designed while having a user at university (or at school) in mind, for instance a lecturer who is using it for preparing her/his lecture or even for actual teaching (by writing on the device and projecting the screen content for the audience) or a student who is using it for taking handwritten notes during a lecture. However, it has found many users outside university, for instance businesspersons who use it for business notes and sales presentations or artists who use it to create sketches and drawings. Its major target devices are tablets with Android 3.0 or later (it is developed on a Samsung Galaxy Note 10.1 with an S-pen, and an Asus Nexus 7, a Samsung Nexus 10, an Amazon Kindle Fire HD, and an Asus MeMO Pad with an Adonit Jot Pro and a Wacom Bamboo stylus). The basic functionality works on all devices with Android 3.0 or later, but some which are hardware-dependent such as pressure sensitivity might not. NOTE: There is a free trial version to test if the app is right for you. The free trial version is fully functional with the exception that the number of notebooks is constrained to two, with no more than eight pages per notebook. User feedback: We would love to hear from you, please send feedback and feature requests to us by email (devel [a] acadoid.com). If you encounter a problem with the app, please email us and we will do our very best to fix it quickly. Major features: * requires only minimal permissions and no internet connection (we do respect your privacy!) * allows multiple pages to be simultaneously visible on the screen (i.e. continuous page view) * allows smooth writing, typing, scrolling, and zooming Additional
