## The Yarnell 7

This book approaches the question of technology from an Islamic ethical perspective. The book tries to broaden the scope of the Sharia to deal comprehensively with the ethical questions and dilemmas that arise in the midst of a postmodern technological culture due to the absence of well-defined religious-ethical ends. It looks at the maqasid as a universal ethical theory to be interpreted and applied in the global technological context. It weaves the contemporary philosophical analysis of technology within the maqasid discourse and assesses modern technology through the lens of the ultimate aims and purposes of the Sharia. It works out the relationship between the various objectives and how they can be developed into an Islamic ethics of technology. Following in the recent interest in the objectives of the Sharia, the book further expands the scope of the maqasid and carries it further to encompass metaphysical and ethical debates surrounding technology.

Anyone interested in finding alternatives to the existing technological model will find this book valuable. Specifically those interested in Islam and Modern World and how ijihad is being undertaken to tackle contemporary ethical problems will find this book helpful.

This volume in the JPS Series is intended to help crystallize the emergence of a new field, "Developmental Social Cognitive Neuroscience," aimed at elucidating the neural correlates of the development of socio-emotional experience and behavior. No one any longer doubts that infants are born with a biologically based head start in accomplishing their important life tasks--genetic resources, if you will, that are exploited differently in different contexts. Nevertheless, it is also true that socially relevant neural functions develop slowly during childhood and that this development is owed to complex interactions among genes, social and cultural environments, and children's own behavior. A key challenge lies in finding appropriate ways of describing these complex interactions and the way in which they unfold in real developmental time. This is the challenge that motivates research in developmental social cognitive neuroscience. The chapters in this book highlight the latest and best research in this emerging field, and they cover a range of topics, including the typical and atypical development of imitation, impulsivity, novelty seeking, risk taking, self and social awareness, emotion regulation, moral reasoning, and executive function. Also addressed are the potential limitations of a neuroscientific approach to the

development of social cognition. Intended for researchers and advanced students in neuroscience and developmental, cognitive, and social psychology, this book is appropriate for graduate seminars and upper-level undergraduate courses on social cognitive neuroscience, developmental neuroscience, social development, and cognitive development.
