Capital Punishment

Business Management for Engineers will help anyone with a technical background understand, and appreciate, the business side of the engineering profession. This book is intended to make you more successful as an engineer by giving you a better understanding of how organizations conduct business. Mastery of a technical skill is quite fulfilling, but if you want to be more than a technical contributor you must know how to work within the business constraints as well. If we define engineering to be the application of science, then business is the application of economics. We'll go a step further and define engineering to be the application of science to develop new products or services that are "useful"; and business to be the application of economics to develop new products or services that are "profitable." A product may be of interest to a great many people, but if the business providing it is not profitable, the business will lose money and, barring financial subsidies, will go out of business - so the product will disappear from the market. Similarly, a product may generate world class profits, but if the product is

not useful - if it does not add value to the buyer - no one will buy it, so again the product will disappear from the market. Engineering and business, go hand in hand. To be truly successful, engineers must develop products that are both useful AND profitable. This book will help anyone with a technical background appreciate the business aspect to the project you are supporting. Even if you work for a "not for profit" business, any project you will be assigned to will have a budget and schedule. Exceed the budget and the business must cut other projects to pay for the overrun. Fall past due on the schedule, and the business will have to find a way to make up the lost time - maybe by cutting other projects. There is always a business aspect to any engineering project. Business Management for Engineers will help technical professionals understand how to balance business success with technical excellence.

To the admirer of farm machinery in all its gritty splendor, the tractor is more than the mechanical workhorse of the modern field. It is a testament to American know-how, a work of mechanical art truly in the American grain. Among these hard-working machines, Ford tractors hold a special place after nearly a century of bringing innovation, dependability, and good old American muscle to farms and fields worldwide. This book provides a hands-on guide to restoring these venerable machines from the ground up, from the first models made to those produced as recently as 1965. With hundreds of full-color photographs, the guide is not just clear and easy-to-follow, but also a feast for the eyes for tractor aficionados. Beginning at the beginning--how to choose and buy your tractor--Tharran Gaines takes readers through step-by-step directions for the complete restoration of Fordson, Ford-Ferguson, and Ford tractors. In straightforward terms he covers everything from troubleshooting and disassembly to engine and gearbox rebuilds, electrical work, reassembly, painting, and post-restoration care and maintenance.

With wit and humor, popular Lost Cities author David Hatcher Childress takes us around the world and back in his trippy final book to the Lost Cities series. He's off on an adventure in search of the apocalypse and end times. Childress hits the road from the fortress of Megiddo, the legendary citadel in northern Israel where Armageddon is prophesied to start. Hitchhiking around the world, Childress takes us from one adventure to another, to ancient cities in the deserts and the legends of worlds before our own. Childress muses on the rise and fall of civilizations, and the forces that have shaped mankind over the millennia, including wars, invasions and cataclysms. He discusses the ancient Armageddons of the past, and chronicles recent Middle East developments and their ominous undertones. In the meantime, he becomes a cargo cult god on a remote island off New Guinea, gets dragged into

the Kennedy Assassination by one of the “conspirators,” investigates a strange power operating out of the Altai Mountains of Mongolia, and discovers how the Knights Templar and their off-shoots have driven the world toward an epic battle centered around Jerusalem and the Middle East.

It's Hard to Hug a Cow is about a Registered Red Angus cow that is not just seen through the eyes of a human as a milk producing, profit making animal but as a friend. This is a fun book for those who love farm animals not to mention the Registered Red Angus raisers. P.S. My friends call me the Dr. Seuss of cows!

Taking the Enlightenment and the feminist tradition to which it gave rise as its historical and philosophical coordinates, *Feminism and the Politics of Travel After the Enlightenment* explores the coincidence of feminist vindications and travel in the late eighteenth and nineteenth centuries, the way travel's utopian dimension and feminism's utopian ideals have intermittently fed off each other in productive ways. Travel's gender politics is analyzed in the works of J.-J. Rousseau, Mary Wollstonecraft, Stéphanie-Félicité de Genlis, Germaine de Staël, Frances Burney, Flora Tristan, Suzanne Voilquin, Gustave Flaubert George Sand, Robyn Davidson, and Sara Wheeler.

The magnitude of the food-waste disposal problem cannot be understated. Utilisation of food waste is of concern to the food processing industry, consumers, environmentalists, and regulators of handling and disposal systems. Food waste is

not consistent in quality, is usually high in moisture content, and is only available locally. This book focuses on the challenges of utilising both wet and/or processed food waste. The regulatory environment relating to food waste, the perspective of the end-users, and practical use as animal feed is also discussed. One of the goals of this publication, other than to give a clear explanation of the subject of food waste and its uses as animal feed, is to stimulate a need for research.

The Big Bud Tractor Story

The first axial flow combine transformed the industry and was hailed as the most significant piece of farm equipment built in the 20th century. The axial flow

used advanced technology to process crops faster and more efficiently than anything else on the market. The axial flow started with research done by a rogue Swedish engineer in the 1950s, was continued in secret by a group of dedicated engineers from East Moline, Illinois, who did their work in a top-secret garage that only a select few were allowed to enter. The book tells the story of how extensive research and development allowed IH to build a new machine that took the market by storm. Done with dozens of interviews of engineers, salespeople, and customers, the book captures the behind-the-scenes drama and the cloak and dagger encounters with rival companies' personnel and machines. The dramatic text is accompanied by more than 300 archival images, concept drawings, sketches, and new photography of the machines and men at work today.
