Cracking Animation

Beginning Android 4 Application Development

Aardman Animations are, unquestionably, one of the biggest success stories in animated films: their masterpieces include Wallace and Gromit, Chicken Run and Shaun the Sheep, as well as much-loved characters such as Morph. Cracking Animation is entertaining, inspiring and essential reading for all Aardman enthusiasts, students of animation or anyone who wants to try making an animated film. This revised edition includes two new chapters. Chapter 7 looks in depth at the development and teamwork involved in a major animated film or television production, using The Pirates! In an Adventure with Scientists! as an exemplar, and Chapter 8 presents exclusive behind-the-scenes insights into the making of Aardman's most recent feature film, Shaun the Sheep the Movie. Packed with practical, fully illustrated and step-by-step descriptions of all the elements involved, this is quite simply the best publication on stop-motion animation.

The Certified Six Sigma Master Black Belt Handbook

Named one of the best books of 2013 by the 'Financial Times', 'Huffington Post' and 'Forbes', this debate-shifting book debunks the myth of the State as a static bureaucratic organization only needed to 'fix' market failures, leaving dynamic entrepreneurship and innovation to the private sector. Case studies ranging from the innovations that make the iPhone so 'smart' to the current developments in clean technology reveal the reality, whereby the private sector only invests after the entrepreneurial State has made the bold, high-risk investments.

An Epidemic of Rumors

Today's market for mobile apps goes beyond the iPhone to include BlackBerry, Nokia, Windows Phone, and smartphones powered by Android, webOS, and other platforms. If you're an experienced web developer, this book shows you how to build a standard app core that you can extend to work with specific devices. You'll learn the particulars and pitfalls of building mobile apps with HTML, CSS, and other standard web tools. You'll also explore platform variations, finicky mobile browsers, Ajax design patterns for mobile, and much more. Before you know it, you'll be able to create mashups using Web 2.0 APIs in apps for the App Store, App World, OVI Store, Android Market, and other online retailers. Learn how to use your existing web skills to move into mobile development Discover key differences in mobile app design and navigation, including touch devices Use HTML, CSS, JavaScript, and Ajax to create effective user interfaces in the mobile environment Learn about technologies such as HTML5, XHTML MP, and WebKit extensions Understand variations of platforms such as Symbian, BlackBerry, webOS, Bada, Android, and iOS for iPhone and iPad Bypass the browser to create offline apps and widgets using web technologies

Grid and Pervasive Computing

This 2-volume set constitutes the thoroughly refereed post-conference proceedings of the 10th International Conference on Security and Privacy in Communication Networks, SecureComm 2014, held in Beijing, China, in September 2014. The 27 regular and 17 short papers presented were carefully reviewed. It also presents 22 papers accepted for four workshops (ATCS, SSS, SLSS, DAPRO) in conjunction with the conference, 6 doctoral symposium papers and 8 poster papers. The papers are grouped in the following topics: security and privacy in wired, wireless, mobile, hybrid, sensor, ad hoc networks; network intrusion detection and prevention, firewalls, packet filters; malware, and distributed denial of service; communication privacy and anonymity; network and internet forensics techniques; public key infrastructures, key management, credential management; secure routing, naming/addressing, network management; security and privacy in pervasive and ubiquitous computing; security & privacy for emerging technologies: VoIP, peer-to-peer and overlay network systems; security & isolation in data center networks; security & isolation in software defined networking.

Scroogenomics

This fresh new text introduces IB from a truly global and contemporary perspective. Packed with case studies drawn from an impressive spectrum of countries, International Business enables students to link theory with practice and encourages critical thinking. Particular emphasis is placed on key issues such as the growing role of SMEs and entrepreneurship in IB, ethics, CSR, corporate governance and global warming.

The Entrepreneurial State

Business Planning and Market Strategy offers students, entrepreneurs, and executives penetrating insights into developing business plans and market strategies that bolster the odds of succeeding in today's highly competitive

marketplace. Rather than reduce the planning process to mechanistic, step-by-step instructions, which promote “thinking inside the box,” author E.K. Valentin provides practical planning guidelines that encourage creative strategic problem solving. Drawing on both his business experience and the business literature, he explains not only what entrepreneurs and executives should look at when pondering plans and strategies, but also what they should look for. The book’s unique applied perspective, sets Business Planning & Market Strategy apart from conventional “how to” planning guides.

Building the e-World Ecosystem

This book lays out all the latest research in the area of multimedia data hiding. The book introduces multimedia signal processing and information hiding techniques. It includes multimedia representation, digital watermarking fundamentals and requirements of watermarking. It moves on to cover the recent advances in multimedia signal processing, before presenting information hiding techniques including steganography, secret sharing and watermarking. The final part of this book includes practical applications of intelligent multimedia signal processing and data hiding systems.

Handbook of Open Source Tools

This book constitutes the refereed proceedings of the 8th International Conference on Grid and Pervasive Computing, GPC 2013, held in Seoul, Korea, in May 2013 and the following colocated workshops: International Workshop on Ubiquitous and Multimedia Application Systems, UMAS 2013; International Workshop DATICS-GPC 2013: Design, Analysis and Tools for Integrated Circuits and Systems; and International Workshop on Future Science Technologies and Applications, FSTA 2013. The 111 revised papers were carefully reviewed and selected from numerous submissions. They have been organized in the following topical sections: cloud, cluster and grid; middleware resource management; mobile peer-to-peer and pervasive computing; multi-core and high-performance computing; parallel and distributed systems; security and privacy; ubiquitous communications, sensor networking, and RFID; ubiquitous and multimedia application systems; design, analysis and tools for integrated circuits and systems; future science technologies

and applications; and green and human information technology.

Python for Unix and Linux System Administration

Describing the essential aspects that need to be considered during the deployment and operational phases of 3GPP LTE/SAE networks, this book gives a complete picture of LTE systems, as well as providing many examples from operational networks. It demystifies the structure, functioning, planning and measurements of both the radio and core aspects of the evolved 3G system. The content includes an overview of the LTE/SAE environment, architectural and functional descriptions of the radio and core network, functionality of the LTE applications, international roaming principles, security solutions and network measurement methods. In addition, this book gives essential guidelines and recommendations about the transition from earlier mobile communications systems towards the LTE/SAE era and the next generation of LTE, LTE-Advanced. The book is especially suitable for the operators that face new challenges in the planning and deployment phases of LTE/SAE, and is also useful for network vendors, service providers, telecommunications consultancy companies and technical institutes as it provides practical information about the realities of the system. Presents the complete end-to-end planning and measurement guidelines for the realistic deployment of networks Explains the essential and realistic aspects of commercial LTE systems as well as the future possibilities An essential tool during the development of transition strategies from other network solutions towards LTE/SAE Contains real-world case studies and examples to help readers understand the practical side of the system

Business Planning and Market Strategy

This book discusses the sensitivity, selectivity, and response times of different sensor materials and their potential application in the design of portable sensor systems for monitoring water pollutants and remediation systems. Beginning with an overview on water pollutants and analytical methods for their detection, the book then moves on to describing the advances in sensor materials research, and the scope for their use in different types of sensors. The book lays emphasis on techniques such as colorimetric, fluorescence, electrochemical, and biological sensing of conventional and emerging pollutants. This book will serve as a handy guide for students, researchers, and professional engineers working in the field of sensor systems for monitoring water pollutants to address various challenges.

Strategic Innovation

As Star Trek celebrates its 50th anniversary, the futuristic tools of Kirk, Spock, Scott, and McCoy continue to come to life. This book merges Star Trek scientific lore—how the science of the time informed the implementation of technology in the series—and the science as it is playing out today. Scientists and engineers have made and continue to develop replicators, teletransporters, tractor beams, and vision restoring visors. This book combines the vision of 1966 science fiction with the latest research in physics, biotechnology, and engineering.

Wireless Mobile Communication and Healthcare

This is the definitive guide for Symbian C++ developers looking to use Symbian SQL in applications or system software. Since Symbian SQL and SQLite are relatively new additions to the Symbian platform, Inside Symbian SQL begins with an introduction to database theory and concepts, including a Structured Query Language (SQL) tutorial. Inside Symbian SQL also provides a detailed overview of the Symbian SQL APIs. From the outset, you will “get your hands dirty” writing Symbian SQL code. The book includes snippets and examples that application developers can immediately put to use to get started quickly. For device creators and system software developers, Inside Symbian SQL offers a unique view into the internals of the implementation and a wealth of practical advice on how to make best and most efficient use of the Symbian SQL database. Several case studies are presented - these are success stories 'from the trenches', written by Symbian engineers. Special Features: The book assumes no prior knowledge of databases Includes detailed and approachable explanations of database concepts Easy to follow SQL tutorial with SQLite examples Unique view into the Symbian SQL internals Troubleshooting section with solutions to common problems Written by the Symbian engineers who implemented SQLite on Symbian, with more than 40 years combined Symbian C++ experience, this book is for anyone interested in finding out more about using a database on Symbian.

A predictable pattern of success Entrepreneurs who have read early drafts of The Start-Up J Curve responded, "I wish I had this book years ago." A start-up unfolds in a predictable pattern; the more aware entrepreneurs are of this pattern, the better able they will be to capitalize on it. Author Howard Love calls this pattern the start-up J Curve: The toughest part of the endeavor is the time between the actual start of a new business and when the product and model are firmly established. The Start-Up J Curve gives entrepreneurs the tools they need to get through the early challenges so they can reach the primary value creation that lies beyond. Love brings thirty-five years of start-up experience to this comprehensive guide to starting a business. He outlines the six predictable stages of start-up growth and details the activities that should be undertaken at each stage to ensure success and to avoid common pitfalls. Instead of feeling lost and confused after a setback, start-up founders and investors can anticipate the challenges, overcome the obstacles, and ride the curve to the top.

Understand Android OS for both smartphone and tablet programming This fast-paced introduction to the newest release of Android OS gives aspiring mobile app developers what they need to know to program for today's hottest Android

smartphones and tablets. Android 4 OS is, for the first time, a single solution for both smartphones and tablets, so if you master the information in this helpful guide, you'll be well on your way to successful development for both devices. From using activities and intents and creating rich user interfaces to working with SMS, messaging APIs, and the Android SDK, what you need is here. Provides clear instructions backed by real-world programming examples Begins with the basics and covers everything Android 4 developers need to know for both smartphones and tablets Explains how to customize activities and intents, create rich user interfaces, and manage data Helps you work with SMS and messaging APIs, the Android SDK, and using location-based services Details how to package and publish your applications to the Android Market Beginning Android 4 Application Development pares down the most essential steps you need to know so you can start creating Android applications today.

Modern Photography

This thoroughly updated second edition of an Artech House bestseller brings together a team of leading experts who provide you with a current and comprehensive treatment of the Global Positioning System (GPS). The book covers all the latest advances in technology, applications, and systems. The second edition includes new chapters that explore the integration of GPS with vehicles and cellular telephones, new classes of satellite broadcast signals, the emerging GALILEO system, and new developments in the GPS marketplace. This single-source reference provides both a quick overview of GPS essentials and an in-depth treatment of advanced topics. The book guides you in developing new applications and shows you how to evaluate their performance. It explains all the differential GPS services available to let you decide which is best for particular applications. You learn how to build GPS receivers and integrate them into navigational and communications equipment. Moreover, this unique volume helps you determine how technology is affecting the marketplace and where best to invest your company's resources.

The Start-Up J Curve

This book contains a selection of thoroughly refereed and revised papers from the Second International ICST Conference on Wireless and Mobile Communication in Healthcare, MobiHealth 2010, held in Ayia Napa, Cyprus, in October 2010. The 33 papers in this volume describe various applications of information and communication technologies in healthcare and medicine and cover a wide range of topics such as intelligent public health monitoring services, mobile health technologies, signal processing techniques for monitoring services, wearable biomedical devices, ambient assistive technologies, emergency and disaster applications, and integrated systems for chronic monitoring and management.

A Requiem for a Brand

From the people who turned teacher education on its ear in Australia in 2001 comes a text about preparing the next generation of teachers. Richard Smith and David Lynch, two of Australia's leading teacher education researchers and the

architects of the acclaimed Bachelor of Learning Management program (BLM), take their previously published ideas about teaching and teacher education further to detail a new paradigm in the preparation of teachers. Drawing on 30 years of teacher education research and their own experiences in redeveloping teacher education in Australia, Smith and Lynch explore what it means to be a teacher in the 2000s, outlining a new vision for the preparation of teachers in a Knowledge Age.

Stress, Self-Esteem, Health and Work

Drawing from his extensive business management experience, Pradip Chand turns traditional wisdom on its head when he proposes that Brand Loyalty is inversely proportional to the income and education levels of the 'knowledge consumer'. He examines how and why brands become strategic assets, traces the evolution of the knowledge consumer and what can companies do to protect equity of the brands they have nurtured over the decades. A new approach to building a Brand Loyalty that gives marketers a competitive edge in today's high-tech, high-stake brand-hostile environment. The book combines the knowledge with engaging real life case studies and proven examples.

Understanding GPS

Distinctively links stress, self-esteem, health and work as a way to develop individual and organizational strategies for dealing with stress. It proposes an innovative concept of organizational self-esteem and a new philosophy for managing companies in order to create an establishment that is healthy emotionally, economically and ethically.

Economist Joel Waldfogel illustrates how our consumer spending generates vast amounts of economic waste--to the shocking tune of \$85 billion each winter. He provides solid explanations to show us why it's time to stop the madness and think twice before buying gifts for the holidays. Gift giving is different than shopping for our own needs: we make less-informed choices, max out on credit to buy gifts worth less than the money spent, and leave recipients less than satisfied, creating what Waldfogel calls "deadweight loss." And this waste isn't confined to Americans--most major economies share in this orgy of wealth destruction. While recognizing the difficulties of altering current trends, he offers viable alternatives. By reprioritizing our gift-giving habits, Scroogenomics proves that we can still maintain the economy without gouging our wallets, and reclaim the true spirit of the holiday season.--From publisher description.

The LTE / SAE Deployment Handbook

Python is an ideal language for solving problems, especially in Linux and Unix networks. With this pragmatic book, administrators can review various tasks that often occur in the management of these systems, and learn how Python can provide a more efficient and less painful way to handle them. Each chapter in

Python for Unix and Linux System Administration presents a particular administrative issue, such as concurrency or data backup, and presents Python solutions through hands-on examples. Once you finish this book, you'll be able to develop your own set of command-line utilities with Python to tackle a wide range of problems. Discover how this language can help you: Read text files and extract information Run tasks concurrently using the threading and forking options Get information from one process to another using network facilities Create clickable GUIs to handle large and complex utilities Monitor large clusters of machines by interacting with SNMP programmatically Master the IPython Interactive Python shell to replace or augment Bash, Korn, or Z-Shell Integrate Cloud Computing into your infrastructure, and learn to write a Google App Engine Application Solve unique data backup challenges with customized scripts Interact with MySQL, SQLite, Oracle, Postgres, Django ORM, and SQLAlchemy With this book, you'll learn how to package and deploy your Python applications and libraries, and write code that runs equally well on multiple Unix platforms. You'll also learn about several Python-related technologies that will make your life much easier.

Digital Information Processing and Communications

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decision were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.

The Art of iPhoneography

Written as a tutorial to explore and understand the power of R for machine learning. This practical guide that covers all of the need to know topics in a very systematic way. For each machine learning approach, each step in the process is detailed, from preparing the data for analysis to evaluating the results. These steps will build the knowledge you need to apply them to your own data science tasks. Intended for those who want to learn how to use R's machine learning capabilities and gain insight from your data. Perhaps you already know a bit about machine learning, but have never used R; or perhaps you know a little R but are new to machine learning. In either case, this book will get you up and running quickly. It would be helpful to have a bit of familiarity with basic programming concepts, but no prior experience is required.

Rethinking Teacher Education

Handbook of Open Source Tools introduces a comprehensive collection of advanced open source tools useful in developing software applications. The book contains information on more than 200 open-source tools which include software construction utilities for compilers, virtual-machines, database, graphics, high-performance computing, OpenGL, geometry, algebra, graph theory , GUIs and more. Special highlights for software construction utilities and application libraries are included. Each tool is covered in the context of a real like application development setting. This unique handbook presents a comprehensive discussion of advanced tools, a valuable asset used by most application developers and programmers; includes a special focus on Mathematical Open Source Software not available in most Open Source Software books, and introduces several tools (eg ACL2, CLIPS, CUDA, and COIN) which are not known outside of select groups, but are very powerful. Handbook of Open Source Tools is designed for application developers and programmers working with Open Source Tools. Advanced-level students concentrating on Engineering, Mathematics and Computer Science will find this reference a valuable asset as well.

GET TO THE FUTURE FIRST! LEVERAGE STRATEGIC NOVELTY (SN) TO TRANSFORM AND DOMINATE YOUR MARKET Become an “outlier organization”: recognize huge opportunities in novelty, and act fast and first Listen for the tremors already building beneath your markets Learn from winning “outlier” business models, organizational forms, markets, products, and services Today, the companies that rise rapidly to dominance are the outliers. They’re radically novel where it matters: whether in business models, products, services, or some other key driver of value. Strategic Innovation reveals how to think like these vanguard organizations—and become one of them. You’ll discover how to borrow the lenses and insights of companies operating right at the edge of conventional industry dynamics and

boundaries...where opportunities are underdefined, predictions unstable, and the greatest opportunities exist. Using linked case studies and a proven three-step methodology, the authors guide you through uncovering Strategic Novelty (SN) with explosive potential...executing quickly... and learning and tweaking relentlessly to amplify your impact. If you keep doing what everyone else is doing, you may succeed—but not greatly, and not for long. If you want to create, transform, and dominate your market, you need to think and act like an outlier. Learn how. Now. Before someone does it to you. Right now, all around you, there's an explosion of new business models, new product/service categories, and new organizational forms. It's a veritable Cambrian Explosion of business life, led by outlier organizations you've never even heard of. Many will remain practically invisible to the incumbents in their markets...until they suddenly explode into dominance. What do they share? A fundamental commitment to Strategic Novelty (SN). Now, in *Strategic Innovation*, leading innovation strategists Liisa Välikangas and Michael Gibbert show you how to leverage SN to become your industry's winning disruptor. You'll master SN through case studies from leading outlier organizations in areas ranging from 3D printing to crowd financing and resource-constrained innovation. Each case is original, previously unpublished, and based at least in part on the authors' direct experiences. Through these cases, you'll explore how each company's story is playing out: sometimes in failure, but often in massive success. You'll discover why incumbents rarely notice outliers in time, and how to keep it from happening to you. Perhaps most valuable of all, the authors help you extrapolate the likely impact of any novelty, so you can tell the difference between promising opportunities and those destined to fail.

The Realization of Star Trek Technologies

The Symbian OS Architecture Sourcebook

This two-volume-set (CCIS 188 and CCIS 189) constitutes the refereed proceedings of the International Conference on Digital Information Processing and Communications, ICDIPC 2011, held in Ostrava, Czech Republic, in July 2011. The 91 revised full papers of both volumes presented together with 4 invited talks were carefully reviewed and selected from 235 submissions. The papers are organized in topical sections on network security; Web applications; data mining; neural networks; distributed and parallel processing; biometrics technologies; e-learning; information ethics; image processing; information and data management; software engineering; data compression; networks; computer security; hardware and systems; multimedia; ad hoc network; artificial intelligence; signal processing; cloud computing; forensics; security; software and systems; mobile networking; and some miscellaneous topics in digital information and communications.

Intelligent Multimedia Data Hiding

This book constitutes the thoroughly refereed post-conference proceedings of the

11th IFIP WG 6.11 Conference on e-Business, e-Services and e-Society, I3E 2011, held in Kaunas, Lithuania, in October 2011. The 25 revised papers presented were carefully reviewed and selected from numerous submissions. They are organized in the following topical sections: e-government and e-governance, e-services, digital goods and products, e-business process modeling and re-engineering, innovative e-business models and implementation, e-health and e-education, and innovative e-business models.

Sensors in Water Pollutants Monitoring: Role of Material

In *An Epidemic of Rumors*, Jon D. Lee examines the human response to epidemics through the lens of the 2003 SARS epidemic. Societies usually respond to the eruption of disease by constructing stories, jokes, conspiracy theories, legends, and rumors, but these narratives are often more damaging than the diseases they reference. The information disseminated through them is often inaccurate, incorporating xenophobic explanations of the disease's origins and questionable medical information about potential cures and treatment. Folklore studies brings important and useful perspectives to understanding cultural responses to the outbreak of disease. Through this etiological study Lee shows the similarities between the narratives of the SARS outbreak and the narratives of other contemporary disease outbreaks like AIDS and the H1N1 virus. His analysis suggests that these disease narratives do not spring up with new outbreaks or diseases but are in continuous circulation and are recycled opportunistically. Lee also explores whether this predictability of vernacular disease narratives presents the opportunity to create counter-narratives released systematically from the government or medical science to stymie the negative effects of the fearful rumors that so often inflame humanity. With potential for practical application to public health and health policy, *An Epidemic of Rumors* will be of interest to students and scholars of health, medicine, and folklore.

Programming the Mobile Web

This book constitutes the refereed proceedings of the Second International Conference on Advances in Communication, Network, and Computing, CNC 2011, held in Bangalore, India, in March 2011. The 41 revised full papers, presented together with 50 short papers and 39 poster papers, were carefully reviewed and selected for inclusion in the book. The papers feature current research in the field of Information Technology, Networks, Computational Engineering, Computer and Telecommunication Technology, ranging from theoretical and methodological issues to advanced applications.

Presents what you need to create stop-motion videos on your mobile phone or digital camera. In this title, you can learn how to make stop-motion videos like a professional. Using tips and tricks from the experts, it reveals 2-D and 3-D techniques with puppets, clay-modelling, morphing and pixilation.

International Conference on Security and Privacy in Communication Networks

Advanced Computing, Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing/overlap among them. However, their convergence is observed in many real world applications, including cyber-security, internet banking, healthcare, sensor networks, cognitive radio, pervasive computing amidst many others. This two volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security, signal and image processing, ontology and human-computer interfaces (HCI). The two volumes together include 132 scholarly articles, which have been accepted for presentation from over 550 submissions in the Third International Conference on Advanced Computing, Networking and Informatics, 2015, held in Bhubaneswar, India during June 23–25, 2015.

Inside Symbian SQL

This volume constitutes the refereed proceedings of the International Conference on Digital Enterprise and Information Systems, held in London during July 20 - 22, 2011. The 70 revised full papers presented were carefully reviewed and selected. They are organized in topical sections on cryptography and data protection, embedded systems and software, information technology management, e-business applications and software, critical computing and storage, distributed and parallel applications, digital management products, image processing, digital enterprises, XML-based languages, digital libraries, and data mining.

Cracking Animation

From the age of thirteen Ray Harryhausen knew his future lay in special effects. Drawing inspiration from his mentor Willis O’Brien, creator of King Kong, Ray took the art and skill of stop-motion animation one step further, weaving his magic on dinosaurs, aliens and mythological creatures alike. From early experiments with animating fairy tales in his father’s garage to creating groundbreaking effects for blockbuster movies, Ray Harryhausen shares the fascinating story of his “animated life”. The last great animator before the introduction of CGI, he takes us through the pleasures and pitfalls of sixty years dedicated to making movie magic.
