This journal was made to complement the bestselling book "The Skinny Rules," by Bob Harper. One of the cardinal rules in the book refers to the importance of eating 30 to 50 grams of fiber each day. This is why we included a special section for fiber when most other food journals only include a section for protein, fat and carbs. We added the fiber section to this journal because of the importance of this rule. Eating enough fiber ensures that you'll have a smaller waistline and feel fuller longer, so it's important to track your fiber intake along with other nutritional information. The other sections conform to other skinny rules such as eating a certain amount of protein per day, eating the right carbs before lunch, consuming healthy fats and more!! The interior of the journal features sections for breakfast, lunch, dinner and snacks. There is also a section for the time because it's important to eat the right foods and certain times throughout the day, according to Bob Harper. Extra space is also provided to track water intake and write down your exercise goals. This book is jumbo sized, to provide more room for writing, planning and goal setting. In addition, we provided margin space for extra notes, stickers or words of encouragement that you might want to add to help you stay on track! (Bonus: Graphing paper is located at the end of the journal! Feel free to use this take extra notes, paste pictures, more goals and create a mini dream / goal board within the book!) 8 x 11 size

farm animals, and includes extensive references. It is organized around major components of animal use: Institutional policies and responsibilities. The committee discusses areas that require policy attention: the role and function of the Institutional Animal Care and Use Committee, protocols for animal care and use, occupational health and safety, personnel qualifications, and other areas. Animal environment, husbandry, and management. The committee offers guidelines on how to design and run a management program, addressing environment, nutrition, sanitation, behavioral and social issues, genetics, nomenclature, and more. Veterinary care. The committee discusses animal procurement and transportation, disease and preventive medicine, and surgery. The Guide addresses pain recognition and relief and issues surrounding euthanasia. Physical plant. The committee identifies design and construction issues, providing guidelines for animal-room doors, drainage, noise control, surgery, and other areas. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities--a resource of proven value, now updated and expanded. This revision will be important to researchers, animal care technicians, facilities managers, administrators at research institutions, policymakers involved in research issues, and animal welfare advocates.

This book constitutes the refereed post-conference proceedings of the 6th TPC Technology Conference, TPCTC 2014, held in Hangzhou, China, in September 2014. It contains 12 selected peer-reviewed papers, a report from the TPC Public Relations Committee. Many buyers use TPC benchmark results as points of comparison when purchasing new computing systems. The information technology landscape is evolving at a rapid pace, challenging industry experts and researchers to develop innovative techniques for evaluation, measurement and characterization of complex systems. The TPC remains committed to developing new benchmark standards to keep pace and one vehicle for achieving this objective is the sponsorship of the Technology Conference on Performance Evaluation and Benchmarking (TPCTC). Over the last five years TPCTC has been held successfully in conjunction with VLDB.

Natural products hold a prominent position in the current discovery and development of drugs and have diverse indications for both human and animal health. Plants, in particular, play a leading role as a source of specialized metabolites with medical effects. Other organisms, such as marine and terrestrial animals and microorganisms, produce very important drug candidate molecules. Specialized metabolites from these varied natural sources can be used directly as bioactive compounds or drug precursors. In addition, due to their broad chemical diversity, they can act as drug prototypes and/or be used as pharmacological tools for different targets. Some examples of natural metabolites that have been developed into useful

The study of natural products is still attracting great scientific attention and their current importance, as a valuable lead for drug discovery, is undebatable. I cordially invite authors to contribute original articles, as well as survey articles, that give the readers of *Molecules* **\*\*MOLECULES NEEDS TO BE ITALICIZED\*\*** updated and new perspectives on natural products in drug discovery, including but not limited to natural sources, identification and separation of bioactive phytochemicals, standardization, new biological targets, pre-clinical and clinical trials, pharmacological effects/side effects, and bioassays.
