"According to Tim Lang, Professor of Food Policy at London's City University, future wars may be fought specifically over agricultural resources. Given the present volatility of food prices and the riots they provoked in 2008, his theory seems to be on the mark. This program assesses the potential for a global food crisis as it guides viewers through issues involving climate change, oil consumption, biofuel development, fish stock depletion, and other topics. A Rift Valley herder discusses drought in Africa; a Cuban scholar details the impact of the Soviet collapse on food transportation in his country; an Indian farmer reports being pressured into planting jatropha instead of food crops; and Senegalese fishermen lament the intrusion of Western corporate interests." -- Back of container.

Introduction to Ocean Sciences

Originally published in 1967, Meagher's masterful dissection of the Warren Report, based on the Warren Commission's own evidence, has stood the test of time. In some cases, declassifications of government records have corroborated the author's suspicions and analyses, such as her amazing assertion that Oswald had never actually been charged with Kennedy's murder, despite sworn testimony to the contrary. Meagher's book raises serious questions not only about Oswald's guilt in the JFK assassination and related crimes, such as the Tippit murder and the Walker shooting, but also about the methods and honesty of the Warren Commission, the FBI, and various Dallas police and other officials. When the Church Committee first began to re-examine the Warren Commission and its relationship with intelligence agencies in 1975, investigators were shocked by what they discovered. In *Accessories After the Fact*, Sylvia Meagher delivers a blistering blow to the credibility of the Warren Report, and decades after its original publication researchers and readers are still discovering what made her work so important.

Farrago's Wainscot is a quarterly online zine that collects the weird and sublime in fiction and poetry. Words cannot be arranged in too strange a fashion for Old Man Farrago, and FWA 1 is the collected assortment of stories from the first year of the Wainscot's revival. Brand new! Fantastically fresh! With dogs in sweaters! Maybe not that last part, but everything else in the previous paragraph is true in the most literary weird sense possible, because that's what one comes to expect with the Wainscot.

Invitation to the New Testament

Human resource departments are key components in the people management system of nearly every medium-to-large organization in the industrial world. They provide a wide range of essential services relating to employees, including recruitment, compensation, benefits, training, and labor relations. A century ago, however, before the concept of human resource management had been invented, the supervision and care of employees at even the largest companies were conducted without written policies or formal planning, and often in harsh, arbitrary, and counterproductive ways. How did companies such as United States Steel manage a workforce of 160,000 employees at dozens of plants without a specialized personnel or industrial relations department? What led some of these organizations to introduce human

resources practices at the end of the nineteenth century? How were the earliest personnel departments structured and what were their responsibilities? And how did the theory and implementation of human resources management evolve, both within industry and as an academic field of research and teaching? In *Managing the Human Factor*, Bruce E. Kaufman chronicles the origins and early development of human resource management (HRM) in the United States from the 1870s, when the Labor Problem emerged as the nation's primary domestic policy concern, to 1933 and the start of the New Deal. Through new archival research, an extensive review and synthesis of the historical and contemporary literatures, and case studies illustrating best (and worst) practices during this period, Kaufman identifies the fourteen ideas, events, and movements that led to the creation of specialized HRM departments in the late 1910s, as well as their further growth and development into strategic business units in the welfare capitalism period of the 1920s. The research presented in this book not only uncovers many new aspects of the early development of personnel and industrial relations but also challenges central parts of the contemporary interpretation of the concept and evolution of HRM. Rich with insights on both the present and past of human resource management, *Managing the Human Factor* will be widely regarded as the definitive account of the early history of employee management in American companies and a must-read for all those interested in the indispensable function of managing people in organizations.

Writers of the Spanish Civil War

This book brings together new essays on six of the most important British and American writers who lived in or visited Spain in the 20th century and whose work bears the impact of the Spanish Civil War of 1936-39. On the occasion of the 75th anniversary of its outbreak, the new angle on the relations between these authors and Spain is the examination of the mutual bond and its fruits from the point of view of life-writing. The six writers - five British and one American - are presented in chronological order of their birth: Gerald Brenan, Robert Graves, Ernest Hemingway, George Orwell, Stephen Spender and Laurie Lee. Their autobiographies, or what they wrote about their lives in or in relation to Spain, are contrasted with the often multiple biographies that were written on them.

Public Policy in New Zealand

In 1997 Mark Salzman, bestselling author *Iron and Silk* and *Lying Awake*, paid a reluctant visit to a writing class at L.A.'s Central Juvenile Hall, a lockup for violent teenage offenders, many of them charged with murder. What he found so moved and astonished him that he began to teach there regularly. In voices of indelible emotional presence, the boys write about what led them to crime and about the lives that stretch ahead of them behind bars. We see them coming to terms with their crime-ridden pasts and searching for a reason to believe in their future selves. Insightful, comic, honest and tragic, *True Notebooks* is an object lesson in the redemptive power of writing. From the Trade Paperback edition.

The proposed work supports MURED goals by fostering research and development activities at Fisk and UTEP which contribute substantially to NASA's mission, preparing faculty and students at Fisk and UTEP to successfully participate in the conventional, competitive research and education process, and increasing the number of students to successfully complete degrees in NASA related fields. The project also addresses directly a core need of NASA for space power and is consistent with the Core Responsibilities of the John Glenn Space Center. Current orbital missions are limited by radiation from high energy particles trapped in the Van Allen Belt because that solar radiation degrades cell performance by damaging the crystalline lattice. Some potential orbits have been inaccessible because the radiation is too severe. Thin-film solar cells, if they can be adapted for use in the unfriendly space environment, could open new orbits to satellites by providing a radiation hard source of power. The manned mission to Mars requires photovoltaic devices for both the trip there and as a power supply on the surface. Solar arrays using thin films offer a low power/weight ratio solution
