Mending Matters explores sewing on two levels: First, it includes more than 20 hands-on projects that showcase current trends in visible mending that are edgy, modern, and bold—but draw on traditional stitching. It does all this through just four very simple mending techniques: exterior patches, interior patches, slow stitches, darning, and weaving. In addition, the book addresses the way mending leads to a more mindful relationship to fashion and to overall well-being. In essays that accompany each how-to chapter, Katrina Rodabaugh explores mending as a metaphor for appreciating our own naturally flawed selves, and she examines the ways in which mending teaches us new skills, self-reliance, and confidence, all gained from making things with our own hands.

While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. A scientist assesses the potential of stem cell therapies for treating such brain disorders as stroke, Alzheimer's disease, and Parkinson's disease. Stem cell therapies are the subject of enormous hype, endowed by the media with almost magical qualities and imagined by the public to bring about miracle cures. Stem cells have the potential to generate new cells of different types, and have been shown to do so in certain cases. Could stem cell transplants repair the damaged brain? In this book, neurobiologist Jack Price assesses the potential of stem cell therapies to treat such brain disorders as stroke, Alzheimer's disease, Parkinson's disease, and spinal cord injuries. Certainly brain disorders are in need of effective treatments. These disorders don't just kill, they disable, and conventional drug

therapies have not had much success in treating them. Price explains that repairing the human brain is difficult, largely because of its structural, functional, and developmental complexity. He examines the self-repairing capacity of blood and gut cells—and the lack of such capacity in the brain; describes the limitations of early brain stem cell therapies for neurodegenerative disorders; and discusses current clinical trials that may lead to the first licensed stem cell therapies for stroke, Parkinson's and macular degeneration. And he describes the real promise of pluripotential stem cells, which can make all the cell types that constitute the body. New technologies, Price reports, challenge the very notion of cell transplantation, instead seeking to convince the brain itself to manufacture the new cells it needs. Could this be the true future of brain repair?
