Backed by the resources of Independent Feature Project/West, co-authors Nicole Shay LaLoggia and Eden H. Wurmfeld have written the definitive low-budget production manual. Using examples from the *Swingers* and *Kissing Jessica Stein*, this comprehensive manual offers the independent filmmaker a single volume reference covering every aspect of making a film: script rights and rewrites, financing, breakdown, scheduling and budgeting, pre-production, production, postproduction, and distribution. A resource guide listing useful references and organizations, as well as a glossary, complete this guide. The companion CD-ROM features interviews with important figures in the independent film industry, including Billy Bob Thornton and Ang Lee. Forms that are illuminated in the text are also included on the CD for ease of use. The new edition is updated with thorough coverage of digital and HD-how to decide which to shoot on, what the financial impact is, and the effect on preproduction. There is also a new chapter on distribution and expanded material on postproduction.

A general purpose digital computer program was developed and designed to aid in the analysis of spacecraft attitude dynamics. The program provides the analyst with the capability of automatically deriving and numerically solving the equations of motion of any system that can be modeled as a topological tree of coupled rigid

bodies, flexible bodies, point masses, and symmetrical momentum wheels. Two modes of output are available. The composite system equations of motion may be outputted on a line printer in a symbolic form that may be easily translated into common vector-dyadic notation, or the composite system equations of motion may be solved numerically and any desirable set of system state variables outputted as a function of time.
