Book & CD. To improve on an award-winning book poses a major challenge to its authors. The authors of this book took the challenge head-on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa, and the rest of Africa. The findings of this study, which dealt with current and near-

future management issues, as well as classical and contemporary thinking about management, were used as the blueprint for the updating of this book. After placing management in context, the authors deal with the knowledge, skills and dispositions required of managers to perform the management functions of planning, organising, leading and controlling in a volatile business world. Examples of how the functions are applied in practice are cited throughout the book. These examples refer mainly to South African organisations and situations that managers in South Africa, and Africa, have to deal with to create and sustain a competitive advantage for their organisations. The book endeavours to break down the silo effect of seeing the management functions as separate activities. This is done by continuously placing the management function at hand in a bigger context. This enables learners of management to assess the implications of management decisions on different people, processes, systems and so on that make up the organisation.

If you only read one "product management" book this year, this should be it. Instead of presenting another spin on how to turn ideas into blockbuster products, *Managing Products to Deliver Solutions* lets you in on a secret that only the most successful business-to-business (B2B) organizations seem to understand: Product management is more about building multi-product solutions that have higher value to businesses and their customers than it is about building great products for individual users. Product management, marketing and sales veteran John Mansour takes you through 25 "how-to" business practices that are applicable to any B2B

product or service company and organizes them into three categories that essentially reveal the key differences between traditional and B2B product management as follows: 1. A wider lens is needed to uncover the most critical needs of businesses and their customers. 2. Business customers value integrated solutions more than best-of-breed products. 3. Product management is more than just product managers. Each practice is written in a "how-to" format to help you reorient your approach away from traditional user-focused product management practices and set your teams up to be more proficient at uncovering the top-down business issues that keep executives up at night and delivering high-value solutions that meet those needs. *Managing Products to Deliver Solutions* is written in a style that makes for easy reading by not overwhelming you with details but offering enough substance to act on. It gives you 25 solid reasons to manage your products as a portfolio to reap the rewards of emphasizing high-value solutions over great products.
