The peculiarly ambiguous character of applied psychology at the present time makes it appropriate to preface this book with an explicit statement of its purpose. The current development of the subject shows two widely divergent tendencies. The field covered by the subject is already large and is expanding rapidly, hence it has seemed best to limit the contents of the book to fundamental principles and the significant results attained in the three divisions of the field which have been most thoroughly explored, namely education, psychotherapy, and the psychology of industry, together with numerous illustrations drawn from other departments. The critical statement of principles is the most important part of the book, since it is by its misunderstanding of these that popular applied psychology usually goes astray. Throughout I have tried to keep the exposition as close as possible to common experience. Here psychology often succeeds only in giving precise form to what wise persons have long known, or reasons for what they have always done; but it is none the less desirable to have such exactitude and rationality scientifically established. This is perfectly genuine "applied psychology," though the fact is sometimes obscured in the atmosphere of experimental investigation. (PsycINFO Database Record (c) 2005 APA, all rights reserved).

Psychology and the Real World: Essays Illustrating Fundamental Contributions to Society is a collection of brief, personal, original essays, ranging in length from 2500 to 3500 words, in which leading academic psychologists describe what their area of research has contributed to society. The authors are true stars in the field of psychology. Some of their work (for example, Elizabeth Loftus's studies of false memories, Paul Ekman's research on facial expression, and Eliot Aronson's "jigsaw," or cooperative, classroom studies) is well known to the public. The research of others is less familiar to nonspecialists, but no less fascinating. The book is unique the world of textbook ancillaries in that it does not reprint writings. Rather, innovative psychological scientists clearly and entertainingly tell readers why their research matters and how their line of inquiry developed. The concept for the book came from the FABBS Foundation, a nonprofit educational foundation that supports the work of 22 scholarly societies that span the cognitive, psychological, behavioral, and brain sciences. The authors have volunteered their contributions. These authors have agreed that all grants, advances, and royalties and other financial earnings from this volume will go to the FABBS Foundation to support their educational mission.
