This is the story of an extraordinary journey that begins for author James Westly back in 1977. He was at the time happily married and involved in a successful corporate business career in Philadelphia. But something was missing. He didn't know quite what it was that he was searching for, but one day a small ad in the personals section of the newspaper caught his attention and started him on a path that totally changed his life. In the months that follow he set out on a journey of self-discovery that would within a year's time lead him to virtually withdraw from the

world to separate himself from his job, his house, his wife, his friends, and his material possessions. In the process he joined a retreat in Northern California and made a new life for himself there, where he began a profound intellectual, emotional, and physical transformation that opened up an entirely different way of living for him. His account of his journey into this new world reads like a novel. He tells his story with a mixture of eloquence and insight that is both breathtaking and inspirational. The journey ends happily, but it is not without its moments of conflict, crisis, and peril. Tom Hyman, author of *Jupiter's Daughter*

We are in the midst of a revolution. It is a scientific revolution built upon the tools of molecular biology, with which we probe and prod the living world in ways unimaginable a few decades ago. Need to track a bacterium at the root of a hospital outbreak? No problem: the offending germ's complete genetic profile can be obtained in 24 hours. We insert human

DNA into E. coli bacteria to produce our insulin. It is natural to look at biotechnology in the 21st century with a mix of wonder and fear. But biotechnology is not as 'unnatural' as one might think. All living organisms use the same molecular processes to replicate their genetic material and the same basic code to 'read' their genes. The similarities can be seen in their DNA. Here, John Archibald shows how evolution has been 'plugging-and-playing' with the subcellular components of life from the very beginning and continues to do so today. For evidence, we need look no further than the inner workings of our own cells. Molecular biology has allowed us to gaze back more than three billion years, revealing the microbial mergers and acquisitions that underpin the development of complex life. One Plus One Equals One tells the story of how we have come to this realization and its implications.

Ether Plus Two takes one step back and ten steps forward. It takes old ether theory from a hundred years ago and adds positiveness and negativeness as dimensions of the universe. Ether Plus Two unifies electromagnetism, gravity, and the strong and weak nuclear forces. Yet it does not stop there, it gives a clear description of time and matter and how it's intimately entwined with the unifying forces. Ether Plus Two solves the four problems with the Big Bang theory, why there is so little antimatter? How galaxies formed in so little time, why Big Bang background radiation is so uniform? And why the universe is so close to being neither open nor closed "flat." Ether Plus Two addresses how the universe began and how it could end. Ether Plus Two reopens the whole universe to exploration.
