### **How to Design, Write, and Present a Successful Dissertation Proposal**

How to Design, Write, and Present a Successful Dissertation Proposal, by Elizabeth A. Wentz, is essential reading for any graduate student entering the dissertation process in the social or behavioral sciences. The book addresses the importance of ethical scientific research, developing your curriculum vitae, effective reading and writing, completing a literature review, conceptualizing your research idea, and translating that idea into a realistic research proposal using research methods. The author also offers insight into oral presentations of the completed proposal, and the final chapter presents ideas for next steps after the proposal has been presented. Taking the view that we “learn by doing,” the author provides Quick Tasks, Action Items, and To Do List activities throughout the text that, when combined,

develop each piece of your research proposal. Designed primarily for quantitative or mixed methods research dissertations, this book is a valuable start-to-finish resource.

This book offers students a comprehensive, theoretical, and practical guide to communication theory. Croucher defines the various perspectives on communication theory—the social scientific, interpretive, and critical approaches—and then takes on the theories themselves, with topics including interpersonal communication, organizational communication, intercultural communication,

persuasion, critical and rhetorical theory and other key concepts. Each theory chapter includes a sample undergraduate-written paper that applies the described theory, along with edits and commentary by Croucher, giving students an insider's glimpse of the way communication theory can be written about and applied in the classroom and in real life.

Featuring exercises, case studies and keywords that illustrate and fully explain the various communication theories, *Understanding Communication Theory* gives students all the tools they need to understand and apply prominent communication theories.

This book provides a comprehensive review of the current knowledge on writing and publishing scientific research papers and the social contexts. It deals with both English and non-Anglophone science writers, and presents a global perspective and an international focus. The book collects and synthesizes research from a range of disciplines, including applied linguistics, the sociology of science, sociolinguistics, bibliometrics, composition studies, and science education. This multidisciplinary approach helps the reader gain a solid understanding of the subject. Divided into three parts, the book considers the context of scientific papers, the text itself, and the

people involved. It explains how the typical sections of scientific papers are structured. Standard English scientific writing style is also compared with science papers written in other languages. The book discusses the strengths and challenges faced by people with different degrees of science writing expertise and the role of journal editors and reviewers.

Writing a research proposal is one of the most important tasks facing academics, researchers and postgraduate students. Yet there is a good deal of misinformation and a great lack of guidance about what constitutes a good research proposal and what can be done to maximise one's chances of writing a successful research proposal. Denicolo and Becker recognise the importance of developing an effective research proposal for gaining either a place on a research degree programme or funding to support research projects and set out to explore the main factors that that proposal writers need to attend to in developing successful proposals of their own. Developing Research Proposals will help readers to understand the context within which their proposal will be read, what the reviewers are looking for and will be influenced by, while also supporting the development of relevant skills through advice and

practical activities. This book: Explores the nature and purpose of different kinds of proposals Focuses on the actual research proposed Discusses how best to carry out and structure the literature review Examines the posing and phrasing of research questions and hypotheses Looks at how methods and methodology should be handled in a proposal Discusses the crucial issues of planning, strategy and timing in developing targeted proposals Denicolo and Becker draw together the key elements in the process of preparing and submitting a proposal and concludes with advice on responding to the results, successful or not, and their relevance to future proposals. The Success in Research series, from Cindy Becker and Pam Denicolo, provides short, authoritative and accessible guides on key areas of professional and research development. Avoiding jargon and cutting to the chase of what you really need to know, these practical and supportive books cover a range of areas from presenting research to achieving impact, and from publishing journal articles to developing proposals. They are essential reading for any student or researcher interested in developing their skills and broadening their professional and methodological knowledge in an academic context.

Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site *The Professor is In*, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers.
