Video Production: Disciplines and Techniques introduces students to the operations underlying multiple-camera video production. This textbook deals with a range of issues from how crew members interact with equipment to the manner in which crews interact with each other. More than just telling students "what to do," this textbook shows how to do a job and why.

iMovie '11 & iDVD: The Missing Manual

Television Production & Broadcast Journalism provides students with basic technical skills necessary to enter the television production industry as a production assistant, and introduces broadcast journalism theory. The text provides an overview of the equipment, job responsibilities, and techniques involved in both traditional studio production and remote location work. The activities and processes involved in each phase of production are presented and reinforced with realistic examples, numerous photos showing students in actual production situations, and engaging student activities. Broadcast journalism coverage includes ethics and news judgment, types of stories, news writing, preparing news packages, and conducting interviews. The broadcast journalism concepts address skills and qualities required in the industry, but also incorporate classroom-appropriate standards and practices. The text places a strong emphasis on the importance of vocabulary and the correct use of technical terms. In addition to the glossary at the end of the textbook, a running glossary within the chapters provides an immediate formal definition of terms, as they are addressed in the text of the chapter. Talk the Talk features explain the difference in meaning between consumer and industry-specific terms, and clarify the proper use of industry terminology. Proper use of industry terms is an important factor in becoming a successful television production professional.

Sound & Vision

This classic, bestselling text introduces students to the basic skills required in all aspects of television production, including camera and studio equipment and remote location production, all the while emphasizing the latest technology.

Producing Videos has been called the 'bible' of video making. A bestseller over many years, it offers a comprehensive and user friendly guide to all aspects of video production - from the first chapter on using a camera (if it doesn't go in easily, don't force it) to the chapter on distribution (no matter what happens, always hold onto your master). All the elements of video production are covered: camera operation; scriptwriting; composition; budgeting; preproduction planning; lighting and sound recording; interview techniques; field production and studio shoots; digital editing; digital postproduction techniques; video streaming and other forms of online distribution. This edition has been fully revised and updated to cover developments in technology, promotion and distribution. It includes tips from over 120 experienced video teachers from around the world, and is illustrated with over 600 photographs and 200 diagrams. Producing Videos is the best handbook available for learning the basics of video making. It is an ideal guide for students, and for anyone who has a flip camera burning a hole in their pocket and aspirations to become the next hot new director. 'Whether you are a beginner or veteran filmmaker, Martha Mollison's Producing Videos serves as a comprehensive guide to all aspects of video production.' - Greg Walters, Portland Community College 'An invaluable resource for developing my students' video journalism skills.' - Kay Nankervis, Charles Sturt University

This book presents papers on various problems of dependability in computer systems and networks that were discussed at the 14th DepCoS-RELCOMEX conference, in Brunów, Poland, from 1st to 5th July 2019. Discussing new ideas, research results and developments in the design, implementation, maintenance and analysis of complex computer systems, it is of interest to researchers and practitioners who are dealing with dependability issues in such systems. Dependability analysis came as a response to new challenges in the evaluation of contemporary complex systems, which should be considered as systems of people - with their needs and behaviours -interacting with technical communication channels (such as mobile activities, iCloud, Internet of Everything) and online applications, often operating in hostile environments. The diversity of topics covered, illustrates the variety of methods used in this area, often with the help of the latest results in artificial and computational intelligence.

High end digital cinematography can truly challenge the film camera in many of the technical, artistic and emotional aspects of what we think of as 'cinematography'. This book is a guide for practising and aspiring cinematographers and DOPs to digital cinematography essentials - from how to use the cameras to the rapidly emerging world of High Definition cinematography and 24p technology. This book covers the 'on-the-set' knowledge you need to know - its emphasis lies in practical application, rather than descriptions of technologies, so that in this book you will find usable 'tools' and information to help you get the job done. From 'getting the look' to lighting styles and ratios, what is needed for different types of shoots and the technical preparation required, this is a complete reference to the knowledge and skills required to shoot high end digital films. The book also features a guide to the Sony DVW in-camera menus - showing how to set them up and how they work - a device to save you time and frustration on set. Paul Wheeler is a renowned cinematographer/director of photography and trainer, he runs courses on Digital Cinematography at the National Film & Television School and has lectured on the Royal College of Art's MA course and at The London International Film School. He has been twice nominated by BAFTA for a Best Cinematography award and also twice been the winner of the INDIE award for Best Digital Cinematography.
