This is the first textbook on pattern recognition to present the Bayesian viewpoint. The book presents approximate inference algorithms that permit fast approximate answers in situations where exact answers are not feasible. It uses graphical models to describe probability distributions when no other books apply graphical models to machine learning. No previous knowledge of pattern recognition or machine learning concepts is assumed. Familiarity with multivariate calculus and basic linear algebra is required, and some experience in the use of probabilities would be helpful though not essential as the book includes a self-contained introduction to basic probability theory.

This publication is based on previous documentation of the nationally standardized Forest Inventory and Analysis database (Hansen and others 1992; Woudenberg and Farrenkopf 1995; Miles and others 2001). Documentation of the structure of the Forest Inventory and Analysis database (FIADB) for Phase 2 data, as well as codes and definitions, is provided. Examples for producing population level estimates are also presented. This database provides a consistent framework for storing forest inventory data across all ownerships for the entire United States. Forest Inventory and Analysis (FIA) is a continuing endeavor mandated by Congress in the Forest and Rangeland Renewable Resources Planning Act of 1974 and the McSweeney-McNary Forest Research Act of 1928. FIA's primary objective is to determine the extent, condition, volume, growth, and depletion of timber on the Nation's forest land. Before 1999, all inventories were conducted on a periodic basis. The passage of the 1998 Farm Bill requires FIA to collect data annually on plots within each State. This kind of up-to-date information is essential to frame

realistic forest policies and programs. USDA Forest Service regional research stations are responsible for conducting these inventories and publishing summary reports for individual States. In addition to published reports, the Forest Service provides data collected in each inventory to those interested in further analysis. This report describes a standard format in which data can be obtained. This standard format, referred to as the Forest Inventory and Analysis Database (FIADB) structure, was developed to provide users with as much data as possible in a consistent manner among States. A number of inventories conducted prior to the implementation of the annual inventory are available in the FIADB. However, various data attributes may be empty or the items may have been collected or computed differently. Annual inventories use a common plot design and common data collection procedures nationwide, resulting in greater consistency among FIA work units than earlier inventories. Data field definitions note inconsistencies caused by different sampling designs and processing methods.

Virtually every important question of public policy today involves an international organization. From trade to intellectual property to health policy and beyond, governments interact with international organizations in almost everything they do. Increasingly, individual citizens are directly affected by the work of international organizations. Aimed at academics, students, practitioners, and lawyers, this book gives a comprehensive overview of the world of international organizations today. It emphasizes both the practical aspects of their organization and operation, and the conceptual issues that arise at the junctures between nation-states and international authority, and between law and politics. While the focus is on inter-governmental organizations, the book also encompasses non-governmental organizations and public policy networks. With essays by the leading scholars and practitioners, the book first considers the main international organizations and the kinds of problems they address. This includes chapters on the organizations that relate to trade, humanitarian aid, peace operations, and more, as well as chapters on the history of international organizations. The book then looks at the constituent parts and internal functioning of international organizations. This addresses the internal management of the organization, and includes chapters on the distribution of decision-making power within the organizations, the structure of their assemblies, the role of Secretaries-General and other heads, budgets and finance, and other elements of complex bureaucracies at the international level. This book is essential reading for scholars, practitioners,

and students alike.
