When a substitute teacher named Miss Pelly comes to class, one student bristles at the change in routine—Miss Pelly doesn't follow the rules like Mrs. Giordano. But in time, our student learns that even though the substitute may do things a little differently, and she may be a bit silly, mixing things up might not be so bad. Told in a series of epistolary poems, this funny, relatable picturebook is a great fit for classrooms and for any child nervous about new experiences.

George Theoharis draws on the experiences and words of successful public school principals committed to advancing equity, social justice, and school reform to show why social justice leadership is needed and how it can be effective. Although facing

tremendous barriers, these principals made important strides toward closing the achievement gap in their schools through the use of humane and equitable practices. Featuring a mix of theory and practical strategies, this timely book portrays how real school leaders seek, create, and sustain equitable schools, especially for marginalized students.

High Schools on a Human Scale

Ever get the feeling that life's a game with changing rules and no clear sides? Welcome to gamespace, the world in which we live. Where others argue obsessively over violence in games, Wark contends that digital computer games are our society's emergent cultural form, a utopian version of the world as it is. Gamer Theory uncovers the significance of games in the gap between the near-perfection of actual games and the imperfect gamespace of everyday life in the rat race of free-market society.

The King's Fifth

The school leaders our children deserve

In recent years, the National Security Education Program (NSEP) has supported an increasing number of programs for teaching languages using different technological media. This compilation of case study initiatives (funded through the NSEP Institutional Grants Program) presents a range of technology-

based options for language programming that will help universities make more informed decisions about teaching less commonly taught languages. The eight chapters describe how different types of technologies are used to support language programs (i.e., Web, ITV, and audio- or video-based materials), discuss identifiable trends in e-language learning, and explore how technology addresses issues of equity, diversity, and opportunity. This book offers many lessons learned and decisions made as technology changes and learning needs become more complex.

Clay Christensen's groundbreaking bestselling work in education now updated and expanded, including a new chapter on Christensen's seminal "Jobs to Be Done" theory applied to education. "Provocatively titled, *Disrupting Class* is just what America's K-12 education system needs--a well thought-through proposal for using technology to better serve students and bring our schools into the 21st Century. Unlike so many education 'reforms,' this is not small-bore stuff. For that reason alone, it's likely to be resisted by defenders of the status quo, even though it's

necessary and right for our kids. We owe it to them to make sure this book isn't merely a terrific read; it must become a blueprint for educational transformation." —Joel Klein, Chancellor of the New York City Department of Education "A brilliant teacher, Christensen brings clarity to a muddled and chaotic world of education." —Jim Collins, bestselling author of *Good to Great* "Just as iTunes revolutionized the music industry, technology has the potential to transform education in America so that every one of the nation's 50 million students receives a high quality education. *Disrupting Class* is a must-read, as it shows us how we can blaze that trail toward transformation." —Jeb Bush, former Governor of Florida According to recent studies in neuroscience, the way we learn doesn't always match up with the way we are taught. If we hope to stay competitive-academically, economically, and technologically-we need to rethink our understanding of intelligence, reevaluate our educational system, and reinvigorate our commitment to learning. In other words, we need "disruptive innovation." Now, in his long-awaited new book, Clayton M. Christensen and coauthors Michael B. Horn and Curtis W. Johnson take one of the most important issues of our time-education-and apply Christensen's now-famous theories of "disruptive" change using a wide range of real-life examples. Whether you're a school administrator, government official, business leader, parent, teacher, or entrepreneur, you'll discover surprising new ideas, outside-the-box strategies, and straight-A success stories. You'll learn how: Customized learning will help many more students succeed in school Student-centric classrooms will increase the demand for new

technology Computers must be disruptively deployed to every student Disruptive innovation can circumvent roadblocks that have prevented other attempts at school reform We can compete in the global classroom-and get ahead in the global market Filled with fascinating case studies, scientific findings, and unprecedented insights on how innovation must be managed, *Disrupting Class* will open your eyes to new possibilities, unlock hidden potential, and get you to think differently. Professor Christensen and his coauthors provide a bold new lesson in innovation that will help you make the grade for years to come. The future is now. Class is in session.
