## **Bast's Record**

The Recovered Notebook of Michael Tadlock's Memoirs A Note by Michael Tadlock II Fate enjoys her little jokes. Like everyone else, I thought my grandfather Michael Tadlock had concluded his memoirs in the year 2016. He certainly left behind a

fascinating account of the first 115 years of his life. Naturally, we wondered why he did not continue his autobiography beyond that point especially since he lived for 35 more years. Maybe he was mindful of Emerson's adage that (if the story goes on long enough) ultimately every hero becomes a bore. As far as I know, my grandfather never committed that offense. Indeed, for the span of years that they encompass, my grandfather's memoirs are remarkably succinct. An important aspect to telling a good story is knowing where to end it. So, perhaps Grand Michael felt that in 2016 he had found both closure and-to the basic pattern of his life-clear perspective. That's what we all assumed. Then-ironically, after the publication of my grandfather's memoirs-a notebook on the later years of his life was found. It turned up in one of the desks that belonged to Grand Michael. These pages had somehow fallen out of a drawer and lodged behind it. The paper had yellowed with age, but the ink had not faded, and the handwriting was unquestionably my grandfather's. My wonderful wife Laura found this document when she finally decided to devote a day to cleaning and refinishing my grandfather's antique oak desk. I don't know why this material was not entered into the computer files. Or maybe it was, then subsequently deleted. In any event, we never found any copy of this material. I have transcribed it faithfully here, exactly as my grandfather wrote it, with nothing either added or deleted.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to:

- Build an accurate threat model for your vehicle
- Reverse engineer the CAN bus to fake engine signals
- Exploit vulnerabilities in diagnostic and data-logging systems
- Hack the ECU and other firmware and embedded systems
- Feed exploits through infotainment and vehicle-to-vehicle communication systems
- Override factory settings with performance-tuning techniques
- Build physical and virtual test benches to try out exploits safely

If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and

algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.
